NMB attains growth with generous Q1 2021 results

By Guardian Reporter

NMB Bank has continued its strong performance in the first quarter of 2021, whereby the bank's profit before tax increased 34 percent year-over-year to 93bn/-, with profit after taxes up 33percent to 65bn/- in the quarter ended March 31, 2021, a quarterly review statement has

Total revenue grew 16 percent year on year (YoY) to 224bn/-from 193bn/-recorded in Q1 2020. The revenue growth was driven by increase in net interest income due to increase in both loans and advances, along with investment in government securities. The bank recorded 10percent YoY growth in non-funded income from increased customer activities on the bank's digital platforms, the statement said.

"The bank continues to demonstrate enhanced operational efficiency," the

By Guardian Reporter

EAST Africa Community (EAC) member countries are estimated to have lost international tourism receipts reaching \$4.8bn in the past year, following the Covid-19 outbreak.

Dennis Karera, EABC vice chairman said at a webinar to introduce a study by the East African Business Council said it was supported by the African Economic Research Consortium (AERC) with funding from the Bill and Melinda Gates Foundation.

The study assessed the impact of COVID-19 on the tourism and hospitality industry, while also examining policy options to protect sector players from COVID-19 disruptions and possible future pandemics.

The study says that tourism which contributed an average of 9.5 per cent to GDP in 2019 and 17.20 per cent of EAC total exports was among the most affected areas in the region. This was reflected in massive reductions in international tourist arrivals, receipts, jobs, visitors to parks and hotel occupancy rates, it said.

From March 2020 when the first cases of Covid-19 were reported in the region, about 4.2m foreign visitors were unable to travel to various destinations in the bloc,

Reject weak cases, magistrates urged

By Guardian Correspondent, Njombe

HIGH Court Principal Judge Dr Eliezer Feleshi has asked magistrates and registrars to stop entertaining weak legal actions brought to courts to ease backlog of cases. Speaking at the launch of resident

magistrate and district courts here on Tuesday, Dr Feleshi (pictured) advised the

judicial officers to carefully go through prosecution files and allow only those that meet evidence and trial thresholds, so as to save time and resources.

"When you receive a charge sheet-be it criminal or civil matter-study it carefully and if it is weak, order it to be redone, direct fresh investigation or simply uphold initial orders," he affirmed.

Before issuing summons to parties involved in legal issues, magistrates and registrars are supposed to ensure that the matters merit being brought to courts of law, he emphasised, directing magistrates to always adhere to the Criminal Procedure Act to avoid weak cases.

"This will help us cut the big number of cases that drag in courts for years unnecessarily," he said.

He also advised magistrates to quicken

'Set standards for tank fuel storage'

By Guardian Reporter

ENERGY minister Dr Medard Kalemani has instructed the Tanzania Bureau of Standards (TBS) to make sure the introduction of standard specifications for fuels such as petrol and diesel is done right at the fuel storage tanks instead of oil tankers to ensure that fuel distributed countrywide is of quality standard, such that the government obtains appropriate

The minister issued this directive on Wednesday upon inspecting fuel storage tanks belonging to Camel Oil and Oil Com firms at Kurasini in Dar es Salaam. TBS experts were on the spot introducing standard specifications to oil tankers for fuel transport countrywide.

"I want you to start to specify the fuel in the storage tanks, and should not wait to fuel being pumped into oil tankers. Suppose they do that when you are not present, how will you know whether the fuel has the required specification standard?" the minister demanded.

Inspecting the Kurasini depots and raising the issue of introduction of specification standards was intended to satisfy himself whether TBS was doing its work appropriately in executing their mandate after the task was removed from a private contractor who was being paid 5bn/- per month, he stated.

"The government wishes to ensure that the fuel is of quality standard and that revenue is collected. We empower our own institutions to do the task instead of

We empower our own institutions to do the task instead of depending on people from outside depending on people from outside." he

The minister similarly directed the Energy and Water Utilities Regulatory Authority (EWURA) to make sure there is adequate supervision of introduction of specification standards on fuel, underlining that TBS has responsibility to gauge the fuel but EWURA has to supervise the work to ensure TBS has

done it properly. TBS Director General Dr Athumani Ngenya assured the minister that TBS has the capacity for the introduction of specification standards on fuel in oil depots so that fuel distributed countrywide bears such standards.

In his inspection visit, the minister was accompanied by Sebastian Shana, the Acting Commissioner for Petrol and Gas in the ministry, along with heads of institutions like the Petroleum Bulk Procurement Agency (PBPA) and EWURA

By Guardian Reporter

A GOLD mining company-OreCorp Limited has handed over new Police Station worth 45m/in Ngoma village in Sengerema District, Mwanza Region in new drive to beef-up security in the

The police station project is part of the Australian-based mining company's latest in a number of community enhancing projects it has completed since taking over management of Nyanzaga mining site in 2015.

The firm's community liaison officer John Bwana handed over the Police Station to the Sengerema District Administrative Secretary, Allan Mhina on behalf of Mwanza Regional Commissioner John Mongella.

The company is currently waiting to be awarded its Special Mining Licence to develop the 670bn/- Nyanzaga gold mine south of Ngoma in the Sengerema District. Once the licence is issued it is anticipated that Nyanzaga will be the first large scale gold mine to be built in Tanzania in over a decade and the first ever large scale mine in the district.

Previous projects include renovation and construction of numerous classrooms at schools within the district, the supply of school desks, iron sheets, cement, water wells and 11,000 tree seedlings for local communities, deepening of Sotta Dam and the upgrade of local roads.

Considering the company has not yet commenced mining, the involvement and commitment to local community projects to date is an indication of OreCorp's generosity and demonstrates its intent to work in partnership with the people of Tanzania to share the benefits from Nyanzaga. "To date OreCorp has paid in excess of 10bn/- in taxes to the government and completed approximately 30 community enhancing projects before we've even put a shovel in the ground. Whilst the mining

industry has received some bad press recently, we want to demonstrate that OreCorp is different," stated Matt Yates OreCorp's Australian MD and CEO.

The police station construction was approved by the Sengerema District Commissioner in mid-2020, following consultation between OreCorp and the villages of Sotta, Nyabila, the Igalula Ward and the Regional Police Commander.

The task to build the facility started in September last year and was fully funded and managed by OreCorp as part of its generous community enhancement scheme and in accordance with its approved Corporate Social Responsibility (CSR).

OreCorp's Tanzanian General Manager Damien Valente said: "The idea to build the police station came from the local people who told us that they have never had a police station in the area. We are pleased to work in partnership with our hosts to enhance their communities and ensure the natural resources bestowed upon them benefits everyone."

For his part, DAS Mhina expressed his gratitude for OreCorp's contribution, noting that the Ngoma Police Station will become the area's main police station serving the surrounding communities.

Nyanzaga is located in the Sengerema District of the Mwanza region in the Lake Victoria Goldfields.

The deposit hosts estimated three million ounces of gold predominantly at a depth below the reach of local artisanal miners and thus OreCorp is not in competition with the local miners for the resource.

Nyanzaga is a significant new gold project for Tanzania and will produce an estimated 200,000 ounces (six tonnes) of gold per annum which will cost an estimated 670bn/-.

Ore Corp's Community Liaison Officer, John Bwana (L), symbolically hands over yesterday the newly built 45m/- Ngoma Police Station to Sengerema district administrative secretary Allan Mhina at Ngoma village in Sengerema District. The mining firm funded the construction in full.

NMB attains growth with generous Q1 2021 results

FROM PAGE 1

review showed, elaborating that the execution of costoptimization initiatives continues to yield positive results, with costto-income ratio improving to 48 per cent in Q1 2021 from 52 per cent in Q1 2020, well below the regulatory threshold of 55 per cent. The bank will continue to implement cost-optimization and operational efficiency initiatives in line with its strategic ambitions and enhancing customer service, it said.

Asset quality has markedly improved due to continued focus on better quality credit origination, robust portfolio risk management and recovery efforts. "This has resulted into containment of impairment charge with marginal increase of

non-performing loans (NPL) ratio to five per cent (within the regulatory threshold) from 6.9 per cent in the previous year."

It affirmed that the bank's balance sheet remains strong, "reflecting continued focus on deepened penetration," noting that the bank's loans and advances grew 11 per cent YoY, while the "delivery of distinctive customerfocused value propositions" facilitated a nine percent YoY growth in customer deposits to 5.3trn/- in Q1 2021from 4.8trillion/in Q1 2020.

"We continue to place emphasis on maintaining a healthy funding base to support sustainable lending growth as we approach H2 2021," the statement specified, elaborating that during the period,

five percent YoY and improved the capital position strengthened with Tier I capital ratio of 19.6 per cent, up from 17.8% in Q1 2020.

> Total capital ratio stood at 20.4 per cent, up from 18.5 per cent in Q1 2020, both being well above regulatory requirement, it stated.

Commenting on the bank's solid performance, CEO Ruth Zaipuna said the bank had a promising start to the year as it continues to deliver consistently to shareholders and communities. The bank's revenue continues to grow due to enhanced customer value propositions and a firm grip on cost and risk. "The encouraging performance in Q1 2021 reflects the good progress along our strategic initiatives and underlines our strong capabilities and commitment to remaining relevant to our customers," she

The bank's capital position remains strong and provides sufficient headroom to support bold growth ambitions. With the firm foundations that are in place and an improved global economic outlook, increased confidence in growth plans is visible, to carry the good momentum into the second quarter. "We remain focused on our key strategic pillars and aim to continue delivering the best-inclass service and experience for our customers and stakeholders, whilst continuing to operate as an agile and efficient bank."

The solid performance reflects continued revenue growth momentum, disciplined costoptimization, and enhanced loan portfolio management, the director added.

Puma Energy Tanzania Ltd retail manager Venessy Chilambo (C) briefs journalists in Dar es Salaam yesterday when the firm's announced the launch of modern retail sites in Bukoba municipality, at Kihonda in Morogoro municipality, at Kigamboni and Kijichi in Dar es Salaam and at Segera in Tanga Region. It said this was in implementation of its plans to cover as many parts of the country as practicable. She is with the firm's network planning specialist for Africa, Alfred Moshi (L), and territory manager Andrea Laizer. Photo: John B

By Guardian Reporter

IN an effort aimed to ensure Tanzanians use quality fuel and services, the oil marketing company-Puma Energy Tanzania has expanded its services to further energize communities.

The company's Retail Manager, Venessy Chilambo said in Dar es Salaam yesterday that plans are to continue expanding its network by opening 20 more retail stations at different locations across Tanzania by the end of this year.

"We believe in the need to support communities by making access to affordable fuels and lubricants at the right quality and the right quantity across the width and breadth of the country," said Chilambo urging

Energy firm assures Tanzanians of quality fuel, expands its wings

using its quality fuels.

According to her, the oil marketing company seeks to achieve its brand purpose through growth and expansion to ensure that more people are carried along and impacted positively.

Chilambo added that with effect from yesterday, all the retail stations will be open for 24 hours daily. She said previously, some of the filling stations operated for between 12 and 15 hours

"We have specialized experts to ensure the quality of our fuel is not compromised. We assure our customers

Tanzanians to continue trusting and of security of supply of high quality fuel approved to international standards," she said.

The newly launched retail sites are Bukoba, Kihonda-Morogoro, Kigamboni and Kijichi-Dar es Salaam and Segera-Tanga.

She said the company has revamped its retail stations at Oysterbay, Upanga, Bagamoyo and Ocean Road in Dar es Salaam.

"This move is keeping with the company's promise of delivering on the last mile to bring our brand purpose of energizing communities to drive growth and prosperity," she added.

justice by starting hearing adjourning, leading to piling up of cases unnecessarily.

Justice and Constitutional minister Prof Affairs Palamagamba Kabudi told the National Assembly on Wednesday that the Law Review Commission was doing the groundwork for review of the Economic and Organized Crime (Control) Act and five other criminal

Other criminal laws up for review are the Prisons Act (Cap 58), the Criminal Procedure Act (Cap 20),

the Community Service Act (Cap 291), the Parole Boards Act (Cap 400) and the Minimum Sentences Act (Cap 90).

Records show that as of end of last month there were 33,473 inmates in the country's jails, 16,735 being prisoners and 16,738 remandees, despite that prisons accommodation capacity is put at 29,902 overall, translating into excess population of 3,671 inmates.

EAC zone gets \$4.8bn tourism earnings loss

FROM PAGE 1

occasioning a dip of about two million jobs, from the about 4.1m jobs in 2019 to 2.2m jobs at last year's end, it said.

Visitors to national parks declined by about 650 per cent, impacting negatively on wildlife conservation resources, while hotels registered average occupancy rates of below 30 per cent, compelling hotel managements to cut down staff levels.

An online survey conducted as part of the study indicated that 26.5 per cent of tourism sector businesses lost entire projected revenues while 44 per cent lost up to 75per cent of projected revenue. Around 17.6 per cent of the businesses lost around 50 per cent of projected revenues, the survey indicated.

Around 35 per cent of interviewed respondents said they reduced staff by more than 50 per cent while 20 per cent reduced staff by 50 per cent or slightly less. Around 32 per cent maintained staff at partial pay and just eight percent of respondents maintained most staff at full

Businesses turned to borrowing to finance routine expenditures like rent and utilities, with reduced operational capital, with the loss of jobs touching off a steep decline in household incomes, it said.

The study will contribute to developing policy options for the EAC Secretariat and the Council of Ministers, it said.

Adopting an EAC coordinated approach in reviving the tourism sector by marketing the region as a single tourist destination, opening EAC skies, rolling out nation-wide vaccination drives and mutual recognition of COVID-19 test certificates are key measures that the report suggested.

Tourism destinations ought to have pandemic preparedness and risk management plans to minimize disruptions in future, the study recommends.

Tourism stakeholders need sustained stimulus packages provided by EAC partner states to redefine tourism products and leveraging digital technologies in tourism marketing and promotion, the report added..

Dodoma

FINANCE and Planning Minister Dr Mwigulu Nchemba, yesterday

commended the Tanzania Agricultural Development Bank (TADB) for diligent performance and backing in earnest Tanzania's agricultural reforms.

Receiving in his office the bank's strategic performance report presented by the agro-bank Managing Director, Japhet Justine, the minister said the contribution of the bank is giving meaning to President Samia Hassan's vision on agriculture and it is showing Tanzanians the relevance of vision

Nchemba praises TADB for backing agricultural reforms

and concern of the president for bank's performance. welfare of the nation.

commend you for implementing all that is contained in this report. It is obvious you have succeeded in many areas and your contribution gives meaning to President Samia's vision on promoting agriculture and it also shows Tanzanians the relevance of that vision to their lives and the president's concern for welfare of our nation," the minister said in a brief acknowledgement of the

The Ministry's Permanent Secretary, Emmanuel Tutuba, also said he was satisfied with the bank's performance. "I see glaring efforts of the bank in furtherance and in implementing the tasks assigned to it by the government," he said adding that the treasury is happy with that kind of performance by the bank.

Justine told the function that since its inception in September 2012 the bank has served over

1,800,000 clients and has convinced lending financial institutions to lower interest rates on loans given to clients in agriculture, livestock and fisheries sectors. "They have lowered the rates from 24 percent to 14 and 17 percent," he told the minister.

He also said the bank is battling to link farmers to markets, support setting up agricultural infrastructure and help clients in the three sectors acquire appropriate and good tools.

1,500 extension officers to get motorcycles to spread new farming technologies

Guardian

Kongwa

THE government will give 1,500 extension service officers motor cycles to enable them to help farmers practise proper crop husbandry and introduce new farming technologies.

Minister for Agriculture, Prof Adolf Mkenda said here yesterday when speaking after inspecting out growers' sorghum farms in the district.

The minister did not say when the motor cycles will be distributed or elaborate on the nature and mode of distribution but said the cycles have been budgeted for in the coming fiscal year estimates.

He described the officers as strategic people in reforming farming in Tanzania.

"Definitely we are giving them the cycles because the government wants our officers to be mobile; we want them to visit and help farmers right in their farms in order to increase productivity. The move should serve to show that the government is very serious on increasing productivity in the agriculture sector," he emphasized.

minister said the The government is keen to see the sector take off by empowering extension services officers, doing research and by encouraging use of good seeds.

"As a ministry we have a strategy to see things moving. One of the components of this strategy is to give our officers motorcycles so that they can give timely advices to farmers and spread new technologies," he said.

The minister also said the ministry will increase cooperation with the Tanzania Agricultural

Correspondent, Research Institute (TARI), saying the institute has so far done a great job in pushing for agricultural reforms by ensuring the nation gets quality seeds that are resistant to diseases and by promoting the culture of examining soil health.

"We believe having right seeds, investing in appropriate soil and timely use of extension services will reward us with the reforms we are craving for," he said.

He commended the contractual arrangement between the Tanzania Breweries Ltd (TBL) and sorghum out growers, saying the arrangement benefits both the farmers and TBL. Farmers are guaranteed a ready market, while TBL is assured of the raw material it needs, he said.

He said because TBL and TARI have their workers in the area and because TBL has empowered extension service officers sorghum production is set to rise from 0.7 a tonne per hectare to 3.5 tonnes per hectare.

Sorghum out grower, Michael Malima, praised the contractual arrangement saying it assured them a good market for their produce and that the price has risen to 550 shillings a kilogramme, while in the past the price ranged between 200 and 300 shillings a kilo.

The minister is visiting agriculture projects in the district as part of his outdoor ministerial scheduled visits and in implementing President Samia Hasani's call on government leaders to visit projects and listen to and solve people's grievances.

"We believe having right seeds, investing in appropriate soil and timely use of extension services will reward us with the reforms we are craving for'

AGREEMENT PERFORMANCE OF WORK (APW) TO ASSESS CONSUMERS' PERCEPTIONS AND PRACTICE TOWARDS READING FOOD LABELS AND THE INFLUENCE OF FOOD MARKETING ON PURCHASING BEHAVIOUR AMONG SCHOOL CHILDREN – REQUEST FOR CURRICULUM VITAE

TERMS OF REFERENCE

BACKGROUND

The burden of diet related Non-Communicable Diseases (DRNCDs) such as Diabetes, Cardiovascular Disease, Hypertension and cancer diseases has been increasing steadily. Obesity and overweight are the most modifiable and preventable risk factors for non-communicable Diseases. Childhood obesity is currently increasing at an alarming rate worldwide with some variations noted across the region which increases the risk of lifelong overweight and obesity hence greater risk and earlier onset of chronic diet related diseases. The observed upward trend in obesity and overweight is attributed to a number of factors including a global shift in diet towards increased intake of energy-dense foods that are high in fat and sugars and lack of knowledge due to limited access to appropriate information and high coverage of advertisements of unhealthy foods. Evidence shows that public campaigns focusing on both healthy diet and exercise reduces significantly the burden of overweight

The Ministry of Health in Tanzania Mainland and Zanzibar with support from WHO, the International Development Law Organization (IDLO) and the International Development Research Centre (IDRC), are currently implementing the RECAP Program (Global Regulatory & Fiscal Capacity Building Program), which aims to build national capacity for the development and implementation of regulatory and fiscal measures for diet and physical activity

Among interventions proposed include food labelling and marketing restrictions of unhealthy foods to children. However, Country Needs Assessment Report shows that there is limited information on consumer perceptions, health literacy and labels. It was further observed that there are no specific restrictions on marketing of foods high in salt, fats and/or sugars to children. Currently, there are regulations and guidelines restricting marketing of some food products, which may be a useful as an entry point for legal reform to introduce such restrictions

In this regard, the Ministry of Health with support from WHO is planning to conduct a consumer survey to understand attitude and practices towards reading food labels and the influence of food marketing on purchasing behaviour among school children.

PURPOSE

The purpose of this consultancy is to support the Ministry of Health to conduct a survey to assess consumers' knowledge, attitude and practice towards reading food labels and the influence of food marketing on purchasing behaviour among

SCOPE & EXPECTED RESULTS

Through a cross-sectional survey covering a representative sample drawn from Tanzania Mainland and Zanzibar, the consultant will be required to:

- · Identify the common packaged foods consumed by
- school children Assess knowledge and attitude of school children towards the use of food labels
- Document the existing food marketing strategies
- · Determine the influence of food marketing on purchasing

TIME FRAME

The assignment must be completed within two (2) months from the date of commissioning

KEY COMPETENCIES AND EXPERIENCE REQUIRED Advanced Degree in health, public health, nutrition and and/or related fields

- Knowledge and experience in conducting nutrition, health or public health research.
- Knowledge and understanding of survey methodology, data analysis, technical and social cultural aspects related to foods and eating habits. Proven research skills and demonstrated expertise in
- analysis and development of technical papers and reports in public health: Capacity to work independently yet with ability to share
- information, receive feedback and engage in dialogue with partners; Good writing and analytical skills; · Excellent interpersonal skills and ability to promote
- collaboration and consensus building;
- Fluency in English MANAGEMENT PLAN

The consultant work closely with the Project Coordination

Team led by the Ministry of Health in Tanzania Mainland and

Zanzibar; WHO Country Office and other relevant expert

FUNDING SCOPE Total budget for the assignment must not exceed USD 10,000 including costs related to the consultancy, ethical

clearance costs, stakeholder meetings/training workshops,

communication and travel as appropriate. **HOW TO APPLY**

Interested individual should submit a cover letter; Curriculum Vitae and Comprehensive Survey Proposal with detailed budget to: afwcotzremit@who.int not later than 7th May 2021. Applications must be submitted through the email address mentioned above with the subject clearly stated: Submission of Curriculum Vitae for "NATIONAL CONSULTANT TO CONDUCT A SURVEY TO ASSESS CONSUMERS' PERCEPTIONS TOWARDS READING FOOD LABELS AND THE INFLUENCE OF FOOD MARKETING ON PURCHASING BEHAVIOUR AMONG SCHOOL CHILDREN".

150-plus women legislators learn leadership skills at 4-day training

By Guardian Reporter

OVER 150 women parliamentarians have been empowered with transformational leadership skills, women's rights and gender equality principles.

The parliamentarians from across Tanzania attended the four-day training workshop in Dodoma organised by United Nations Women (UN Women) in partnership with the Tanzania Women's Parliamentary Group (TWPG). The training was part of the UN Women-led project on Women' Leadership and Political Participation, "Wanawake Wanaweza" Phase II.

According to the TWPG Chair, Shally Raymond, the workshop aims to strengthen and equip current women MPs with further knowledge and skills to participate in parliamentary discussions and debates, and to effectively undertake their duties in advancing women's rights and gender equality.

"This is a unique opportunity for all of us, and especially young and newly elected women MPs, to see how we can ensure we execute our decision-making roles effectively, for the benefit of women and girls, and all Tanzanians," she said.

At the opening of the training, the UN Women Deputy Representative, Julia Broussard, said that as statistics show that nearly half of the current women MPs are in their first term in the National Assembly, strengthening capacities of the women members is especially important.

She said the training, which also included selected male members of parliamentary committees will help ensure that women's rights and gender equality is better promoted in parliament.

"This includes promotion through legislation, budgeting and oversight processes, as well as through private motions," said Broussard.

Workshop participants commended the government for significant progress made on gender equality and the advancement of women's leadership and decision-making.

It was stressed that the country being the first in East Africa to have a woman as Head of State, the 37percent proportion of women in the national parliament- which is 13pecent over the global average, and the President's recent commitment to promote gender equality and women's empowerment through the appointment of more women in leadership and decision-making- as key achievements.

One of the MPs participating in the workshop, Ng'wasi Kamani stated that in order to make greater progress and achieve goals for 50/50 representation in decision-making, some of the persistent key obstacles to women's leadership still need to be addressed.

Six schools closed in Kyela due to floods

By Guardian Correspondent, Kyela

THE government has decided to temporarily close down six schools in Kyela District in Mbeya Region after they were surrounded by floodwater from three rivers - Mbaka, Lufilyo, and Kiwira, the situation that threatens the students' lives.

Four of the closed schools are primary schools including Masebe, Mjwanga, Kajunjumele, and Tenende, and two are secondary schools - Mwaya and Tenende.

This was disclosed by the Disasters Coordinator from the Prime Minister's Office, Winfrida Ngowi said when presenting various items as assistance to flood victims, saying six wards in the District - Mwaya, Katumba-Songwe, Talatala, Kajunjumele, Matema and Bujonde were the ones affected most.

She said in their assessment, they discovered that apart from the schools, 122 houses were destroyed by floods leaving 614 without shelter.

She said following the disaster, the government, working together with other stakeholders begun rescue services including setting a camp for the victims and providing them with assistance.

"A special committee was formed to coordinate the disaster and trained it on how to deal with disasters, but also both the district and regional disaster committees continued to deal with the issue," she added.

She said an in-depth evaluation was continuing to see how to find a permanent solution to frequent floods from the three rivers.

Kyela District Commissioner Cloudia Kitta said no one died from the floods apart from losing properties including their homes.

The DC said they received instructions from the Regional Commissioner Albert Chalamila to identify all households in flood-prone areas to enable a correct solution to be reached on the residents thereof.

Kitta said there is the possibility some of them would have to be moved to a more safe area.

Kyela district Acting Director Kenneth Mzilano said they received various items in assistance from the government, especially from the PM Office (Disasters Department) to help flood victims.

He said the assistance included 202 mattresses, 1,000 mats, 800 pails of edible oil, and 150 blankets.

Kitta also said they received 20 tents as a shelter for flood victims, 1,000 kgs of rice, and one bale of clothing.

FRIDAY 30 APRIL 2021

Taking A New Look
At The News
ESTABLISHED IN 1995

Why should schools worry this much over cellphones?

HAT appears to be a rather simple regulatory matter regarding rules of staying in boarding schools seems to be troubling many schools in the country.

Mbeya Region has witnessed fire incidents in at least two schools on account of disgruntled students having their mobile phones confiscated, and moving to revenge. Upon being suspected following police interrogations, the students end up being suspended, caned, fined.

While lately Mbeya has been in the news, school fires aren't new and in the Fire and Rescue Force report for last year.

It is hard to find answers for these issues as they appear to come from disparate quarters, some fires being started by saboteurs not liking the fact that there is a school at a particular place instead of a farm or graves of traditional elders, etc.

In the past there were suspicions that some budding radical elements may have generated at least one school fire - in 1994.

One thing about the current spate of fires and differences of opinion between school administrators and regional authorities on the one hand and students on the other, while parents are belatedly informed on what some rowdy teenagers would have done in school, is the lack of civil society voices.

It is possible they may have sat somewhere and examined the issue, but it is harder to say whether there has been a national event where the matter is explained in psychological and technological terms.

For instance, where are issues of right and discipline in this context? Is wishing to keep a mobile phone unacceptable?

One item that came up in a past discussion on what happened, apparently at Kiwanja Secondary School and lately at Iyunga Boys Secondary School both in Mbeya Region, was that owning mobile phones just cannot be regulated

uniformly.

There are situations where teachers find their social position within the school environment disrupted because they have old-fashioned mobile phones while students from affluent families or other connections have smart phones.

Administrators thus worry that taking students' minds away from lessons and school regulations to chatting can be harmful.

There is little reason to believe that school administrators are wrong in wishing to keep out mobile phones from such premises, but there is also a lingering worry that this prerogative is akin to older episodes in history where sections of society fight modernisation.

There was for instance no television in Tanzania up until close to 30 years after independence as it was considered potentially subversive as a communication or information tool.

Is it not possible that communicating with parents, and even with friends, doesn't have to wait until end of the term or annual holidays? And are students exposed to mobile phones likely to fail?

The irony of such a contention is that day schools ought to be closed because students will not concentrate on studies, now that they have unlimited access to mobile phones. If that isn't correct, how can it be true for those in boarding schools? Isn't research relevant there? This is where civil society networks can help.

Economic crimes review opportune, as we consider congestion in prisons

NOTHER trying moment is in the air on what to do with congested prisons, this coming up as part of a wider law reform effort being intimated by the government.

The main element outlined by the Constitutional and Legal Affairs minister is the reviewing of the Economic Crimes Act, where some ideas were being floated by MPs - including a suggestion that plea bargaining be done in open court and views relating to unequal bargaining platforms between the government and suspects.

According to the minister, the Law Review Commission is doing the groundwork for review of the Economic and Organised Crime (Control) Act and five other criminal laws, a move primarily aimed at decongesting the country's prisons.

He said this would also spare money spent in running overburdened correctional facilities, pointing at criminal legislation slated for review as including the Prisons Act (Cap 58), the Criminal Procedure Act (Cap 20), the Community Service Act (Cap 291), Parole Boards Act (Cap 400) and the Minimum Sentences Act (Cap 90).

The minister pointedly noted the need for evaluation of instituting alternative punishments, not custodial sentences.

Socially speaking there is a crossroads reached on this matter, with the government seeking to make the country freer in that law enforcement institutions will be more sympathetic to criminal suspects.

Unless there will also be enhanced prospects in society, where salaries are nearly adequate for civil servants and positions

are competitive enough while discipline is enforced owing to the competitive environment to holding jobs, negative things could happen.

Using other methods of noncustodial punishment risks freeing up robbers and muggers, causing

That kind of scenario has been experienced quite often in the past, during independence celebrations in particular, where habitually the Head of State, in a prerogative of clemency, orders the release of carefully selected or prior listed offenders.

The challenge that is at times ignored or hushed up in teaching prisoners this or that life skill is that adapting after imprisonment is not easy, as receptive networks in society tend to dry up after time in jail. If one doesn't earn on his or her own, it is hard to find any habitat or sanctuary.

The minister may not have dwelt comprehensively enough on what the ministry thinks about former President John Magufuli's proposition that prisoners feed themselves through hard work.

It is unclear if this method can't also be applied in widening prison space so that the cramping habitually reported is eased.

There is a danger that the subject matter is taken over by agencies looking upon society itself as a correctional facility.

Some of these are virulently opposed to custodial treatment of violent mental disorder on human rights terms. Instead of rushing to reduce costs on prisoners' maintenance, or listening indoors to NGOs, deep social anxieties ought to the lead in the issue, and we can seek soft loans for low-cost but secure prison facilities.

By Richard Wetaya

FRICA'S Great Green Wall, a climate crisis initiative that offers hope for some of the continent's most beleaguered farmers, is back on a steady trajectory after securing US\$14 billion in new funding for the next decade.

Once complete, it will reportedly be the largest living structure on the planet, covering an area 8,000 km long by 17 km wide - three times the size of the Great Barrier Reef - and stretching across the entire continent.

With the fresh infusion of funds - obtained at the Paris-One Planet Summit for Biodiversity - it is anticipated that hard-pressed pastoral and agricultural communities long challenged by poverty and persistent food insecurity in the Sahel and Horn of Africa regions will enjoy better lives.

Diarra Fatoumata, a 38-yearold mother of four, is from one of those farming communities -Koremairwa village in the Doutchi District of southwestern Niger. She is one of many smallholder farmers who recently received improved millet and maize seeds, courtesy of the initiative.

"My farming prospects have gotten better on account of using improved grain seeds," she said recently.

She elaborated: "Previously, some of the seeds I used to plant would germinate but the crops would wither and die off. With the new seeds, I am now able to produce and harvest sturdier crops, which have a better market value

"Together with other smallholder farmers from my village and other areas of the Sahel, we have also attained training on appropriate crop rotation and how to use small-scale irrigation for crop production and for extending farming activities into the dry season."

For good measure, a number of smallholder farmers in Sudan, Eritrea, Ethiopia and Djibouti were also trained in proper agroforestry, water harvesting and irrigation practices and on how to create shelterbelts for their farmlands.

"Shelterbelts are now helping many farmers in controlling soil erosion in Sudan," said Abdel Aldai, a wheat and maize farmer in Karima, Sudan.

He added: "With agroforestry, we were taught how to integrate trees, which are helpful in climate change mitigation, into our farming activities, with an aim of achieving better productivity by tapping into the ecosystem amenities supplied by trees."

Agricultural and environment policy analysts reckon that the

Great Green Wall promises better lives to African farmers hit by climate crisis

additional funding vouchsafed by the French government, the African Development Bank, the World Bank, the European Commission and other sources will breathe new life into the initiative.

The initiative has just under a decade to achieve its goals of creating 10 million green jobs, sequestering 250 million tonnes of carbon, restoring 100 million hectares of degraded land and protecting Africa's biodiversity, while reducing poverty and food insecurity.

Its mediocre progress to date was highlighted in a United Nations status report, Great Green Wall: Implementation Status and Way Ahead to 2030, released last year.

The report found that the though the initiative was more than halfway to its 2030 completion date, it had only covered 4 per cent of its target area.

The findings did make for good reading in some African ecological and environmental research think tank circles.

"For some, it was an indictment on the people in charge of the initiative," said Faustin Banjoko, a climate action and development policy expert.

He added: "It also lent credence to schools of thought that held that zero net degradation and dryland tree planting (afforestation) in the 7 million square kilometers Sahel region would face long odds, as had been the case with the North African Green Dam project."

By all accounts, however, the initiative's execution shortfalls were due to deficiencies in funding and technical support. Now those obstacles seem to be out of the way.

Godfrey Oluka, an environment specialist at the United Nations Development Programme, said the new funding - in a year, that marks the beginning of the UN's Decade for Ecosystem Restoration - may just be the silver lining the initiative needed.

"It is a welcome development. It will hopefully draw forth a renewed urgency in executing the initiative's targets - that is, the restoration of degraded land in the Sahel, a region that experiences a 3 per cent decline in agricultural production, per year, due to land degradation.

The region has in the last 30 years been devastated by severe drought and massive loss of fertile land, due to climate change and over-farming, and the enhancement of agricultural production systems in the rest of the Great Green Wall (GGW)

intervention zones, represented by Ethiopia, Eritrea, Mauritania and Djibouti," Oluka said.

Banjoko elaborated: "On the face of it, there is a lot of progress being made in the GGW nations especially in the areas of promoting agroforestry, improving livestock breeding, providing green jobs, creating shelter belts for farmlands, improving irrigation efficiency for agricultural production, strengthening climate resilience and boosting pastoral and agropastoral regenerative agricultural production.

"These will, in the course of time, all translate into better incomes and a better food security status quo."

Because crop production in the Sahel is for the most part rain-fed with limited irrigated agriculture, several smallholding traditional agriculture farmers in countries like Niger, Burkina Faso and Mali have been getting apprenticeships on the improved use of sprinkle and drip surface irrigation techniques and on proper rainwater harvesting practices.

There was further good news for farmers when the Green Climate Fund and the International Fund for Agricultural Development recently announced that they had a pipeline investment project called the Great Green Wall Umbrella Programme (GGW Up).

It would ostensibly boost climate finance for the GGW nation's rural populations and would ensure that small-scale farmers and agribusinesses have better access to markets and strengthened value chains, creating economic opportunities and jobs, through the development of climateresilient infrastructure and expanding the use of solar energy.

Speaking at the One Planet Summit, Susan Gardner, director of the UN's Environment Programme's Ecosystems Division, said the initiative was an inspiring example of ecosystem restoration in action.

"This initiative alone will not transform the Sahel's fortunes overnight but will rapidly become a green growth corridor that will bring investment, boost food security, create jobs and sow the seeds of peace," she noted.

In recent years, however, there have been growing concerns that the ongoing conflict in central Sahel would slow down progress, particularly in Mali, Burkina Faso and Niger.

There are already grim realities on the ground with statistics from the International Organisation for Migration's Displacement Tracking Matrix indicating that over 1.5 million people have been internally displaced by the ongoing crises in the three nations.

Notwithstanding that, there are pointers to strides being made. During a recent International Forest Day Forward Thinkers Webinar, Louise Baker, managing director of the UN Convention to Combat Desertification Global Mechanism, said about 20 per cent of the project's target area has now been completed.

"All partners are working assiduously towards the initiative's 2030 targets," she said, adding: "Eighteen million hectares of the proposed 100 million land hectares have been restored, 350,000 green jobs out of the proposed 10 million have been created and about US\$90 million generated by communities in the initiative's intervention zone."

On the green economy front, the anticipation is that by the initiative's completion point, 8,000 kilometers of the intervention zone's land area will be covered with a mosaic of trees and plants.

Thus far, more than 5 million hectares of degraded land have been restored in Niger and 12 million trees planted in Senegal. Some 15 million land hectares have been restored in Ethiopia; 29,602 hectares in Burkina Faso; 52,930 hectares in Eritrea, and 120 hectares of land in Mali, among other places.

According to the UN report, land restoration in the project intervention zones positively impacted 15 of the 17 global Sustainable Development Goals (SDGs). By all accounts, the US\$90 million generated helped to reduce rural poverty in the intervention zones.

Baker is upbeat about the initiative's prospects. "This initiative will not come up short like previous tree planting ecological projects on the continent. The difference is that it is owned and implemented by communities and countries themselves," she said.

She added: "Each country has designated a protected area dedicated to activities along the Great Green Wall, managed by their local communities.

"A unique practice known as rainwater harvesting which collects the heavy annual rainfall and distributes it through irrigation systems, is one of the ways in which the Great Green Wall is sustained. Sustainability of this programme is already being owned by the communities."

Why fully investigating Covid-19's origins still matters

By Jamie Metzl

S terrible as Covid-19 has been, it's entirely possible -likely, even - that we'll face another pandemic unless we identify how this crisis began and fix our biggest shortcomings.

Yet, well more than a year after the outbreak, we still lack a credible, comprehensive international investigation into the origins of the pandemic. That should frighten everyone.

Although global media reports have repeatedly referenced a "World Health Organisation investigation" into Covid-19 origins, it may surprise many people to learn that this review was not carried out by the WHO and was not, by the admission of the UN health agency's leader, even an inves-

Instead, an independent committee of experts organised by the WHO, with a very limited mandate, spent only two weeks on the ground in Wuhan, China, engaging in a highly curated, restricted study tour during which they were denied access to basic essential information.

On the day this international committee and its Chinese counterparts released their highly incomplete joint report - which significantly echoed the Chinese government's position on Covid-19 origins - WHO Director General Tedros Adhanom Ghebreyesus released a statement highlighting the difficulties the international experts experienced accessing raw data.

Additionally, he rejected the joint study team's recommendation to restrict the scope of the examination and to conduct no further examination of a lab-leak hypothesis for the pandemic's origin.

Dr Tedros wisely recognized that understanding how the pandemic be-

It is for a reason that no stone should be left unturned in investigating plane crashes. Even though it's good to promote airline safety in general, finding the specific problem that caused a particular crash allows us to address what tragedy has shown us to be an imminent threat. Until we identify and fix that problem, other planes remain at risk.

The same is true with understanding the origins of Covid-19. There are many things we should do to prevent future pandemics, but we can't do everything at once. Figuring out how this particular crisis began - like understanding why a particular plane crashed - is essential to prioritizing our

No evidence has so far been identified categorically proving the hypothesis that the novel coronavirus spread through zoonotic means - in other words, jumped from a bat through a series of intermediate animal hosts in the wild before infecting humans.

But imagine what would happen if scientists should prove that's how the pandemic began: Ecologists and virologists who have long warned that our assault on nature is creating monumental risks to our species and planet would get a big boost; political support and funding for research, surveillance and conservation would likely increase. We'd step up efforts to better regulate wet markets and wild animal trade, too.

Now imagine how differently things would play out if we were to discover that Covid-19 stems from an accidental lab incident amplified by a cover-up - another theory that has not been categorically proven at this point.

Should that hypothesis be validated, we would be forced to urgently ask extremely uncomfortable questions about ongoing dangerous activities in Chinese laboratories and the threat that China's aggressive science and lack of transparency pose to the world.

We would reconsider the proliferation of under-regulated, high-risk virology institutes across the globe and far more seriously consider whether

WHO Director General Tedros Adhanom Ghebreyesus

research that involves making dangerous pathogens even more dangerous - the type of research that reportedly was being conducted at the Wuhan Institute of Virology - is worth the risk.

Given these stakes as well as the massive national and geopolitical implications for China, it's easy to guess why the Chinese government has worked tirelessly to prevent any serious investigation into a possible lab incident and, instead, has tried to focus attention on other theories about how the pandemic began.

Over the past year, Chinese authorities have destroyed biological samples, hidden essential laboratory records, and imprisoned citizen journalists asking tough questions about the Wuhan virology institutes.

They have also banned Chinese experts from publishing Covid-19 research papers or making public statements about pandemic origins without governmental approval.

Why might the Chinese government be

more partial to the possibility that the pandemic sprang from nature and was not leaked from a lab? For the same reason there's a big difference in perception between getting cancer from sun exposure and getting it from Chernobyl.

Although no one could blame China for a natural occurrence, people around the world and in China would be enraged if it were discovered that Covid-19 stemmed from an accidental lab leak and cover-up. Chinese President Xi Jinping's grip on power could be threatened.

It's harder to understand why the international expert committee recommended no further examination of the lab incident hypothesis. Perhaps some of its members felt that even limited collaboration with their Chinese counterparts, made possible through a restricted process, was better than none at all.

But any effort to prevent a full investigation into all pandemic-origin hypotheses with un-

restricted access to all relevant records, samples and personnel in China and beyond should be recognized for what it is - a threat to all of us and to future genera-

Everyone on earth is a stakeholder in getting to the bottom of how this terrible crisis began and our many other ensuing failures as essential first steps towards addressing our greatest vulnerabilities.

Luckily, the assertions by the WHO director general that all origin hypotheses, including a possible lab incident, must be fully investigated and that "we must continue to follow the science and leave no stone unturned as we do", have created preliminary grounds for hope.

Having the WHO director general fully supporting a comprehensive investigation into all origin hypotheses should bury, once and for all, the absurd notion that some Covid-19 origin hypotheses can be easily or summarily dismissed.

The onus is now on our leaders and the international community to translate these words into the full investigation we so desperately need.

Tedros stated that he will potentially invite experts better able to investigate the lab leak hypothesis to join the process. The critical attitude by the Chinese government towards this suggestion, paired with Beijing's ability to veto any investigators from joining the team or entering China, may make this difficult - if not impossible.

If China chooses to stand in the way of better utilising the existing process, other options could include the WHO and China negotiating new terms for a full investigation, and having countries pass a resolution in the World Health Assembly (the WHO's governing authority) calling for a comprehensive international scientific and forensic investigation.

Should that prove impossible, there would have to be established a parallel investigation bringing together interested states, experts and others dedicated to the greatest possible understanding of pandemic origins with or without Chinese participation.

The stakes for pushing this kind of full investigation are clearly high. But the consequences of failing to do all we can to understand how this terrible pandemic began would, over time, prove far greater.

Short on skills, big on threat. The security challenges...

JOHANNESBURG

HE cybersecurity skills shortage is worsening. This is the definitive view of the ESG report 'The Life and Times of Cybersecurity Professionals 2020' and that of multiple other surveys, reports and industry analyses.

Organisations are facing an unprecedented threat. Cyber attacks, fraud, phishing, breaches and hacks have increased in sophistication, focus and capability

Phishing is a cybercrime in which targets are contacted by email, telephone or text message by someone posing as a legitimate institution to lure individuals into providing sensitive data such as personally identifiable information, banking and credit card details, and passwords.

Every front is vulnerable, every corner is at risk and the skills required to support organisations in the battle are rare, expensive and hard to find.

According to Anna Collard, Senior Vice President of Content Strategy and Evangelist at KnowBe4 Africa (arguably the world's largest integrated security awareness training and simulated phishing platform), this is not the time to behave like an ostrich or spend more money on that skilled and expensive individual

Rather, it is an opportunity to engage in local skills development that can make a long-term difference to both the economy and the availability of skills.

"Organisations across Africa must care about skills development to over-

"Organisations across Africa must care about skills development to overcome the skills shortage predicament," she notes.

Collard elaborates: "This is the time to invest into initiatives like Gov-X or Cyber Heroines that actively encourage people to become part of the cyber-security industry, and that help to develop their skills. This is one career that is set to grow and evolve over the next few years, and we need to inspire people to recognize it as such."

Amidst the challenge of limited skills, there is a pressing need to empower women within the cybersecurity space. With far more males than females currently in the industry, security is a sector that would benefit from not just volume but also from diversity.

Creating a space that is attractive to women would not only benefit the sector in terms of adding fresh flavour to security thinking and approaches but could significantly change some of the urgent issues that have arisen around women's rights during the Covid-19 pandemic.

"There is a growing body of research that points to how women have been set back by decades thanks to the global pandemic," says Collard.

She adds: "This makes the connection between empowering women and connecting them to an industry that sorely needs their talent even more rel-

evant. This is the time for organisations and industry to tackle inequality alongside skills diversity and to potentially resolve two problems at the same time. It is never going to be a quick fix, but it is an intelligent one."

Women are often the sole breadwinners in their families, and they often work in roles that will be replaced in the future - or have already been replaced.

The average ratio of women in the cybersecurity indus-

try is 20 per cent but in Africa it is only 9 per cent while women only take up 1 per cent of the roles in executive management. This is according to Nir Kshetri, professor of management at the University of North Carolina.

Women are facing a real danger of being left behind and, considering that the current cybersecurity skills shortage is sitting at 3.12 million and that job vacancies are gathering dust and cobwebs, it is a superb opportunity for organisations to invest into new ways of attracting women to join the industry.

"It is a fascinating industry to be in," says Collard, adding: "The perception that you have to be a math genius or a technology wizard to thrive in security is just that - perception. The truth is that it requires the ability to think laterally, to collaborate and to be willing to learn. These are boxes anyone can tick, given the right opportunity."

KnowBe4 currently works with governments and other leading industry players on the Gov-X innovation challenge to promote skills development across the country.

This collaboration with senior security professionals and enterprises is allowing for younger people to connect with mentoring opportunities and to really understand what the cybersecurity industry truly offers.

"In addition to these formal projects and initiatives that are designed to motivate and inspire students to join the industry, there needs to be a massive focus on cybersecurity within education," concludes Collard.

"This needs to become a part of the school curriculum, giving students the opportunity to develop relevant life and career skills that will stand them in excellent stead down the line," she says, adding: "Cybersecurity is not a flash in the pan career, it is here for the long haul and now is the time to inspire people to join."

Hints on how to make your freelance reporting sustainable

By Andy Hirschfeld

EWSROOM layoffs have become an evergreen storyline in the media industry today. More than 16,000 newsroom jobs in the United States were slashed in 2020, across local newsrooms and media giants alike.

Whether by choice or increasingly out of necessity, it is clear that more and more journalists are turning to free-lancing.

I was intimidated when I began to freelance: I had no idea where to look, or even how to begin. Let alone how to navigate the - thankfully deteriorating - stigma around freelancing and develop an understanding of how to make a sustainable living out of it.

With the right tools, mindset and approach, though, not only can you survive as a freelance journalist - you can thrive. In some cases, you might actually fare better financially than you would with a staff job.

I compiled tips from some prolific career freelancers, and from my own experience as a freelance reporter.

Shift your mindset and language

Freelancing is not for everyone. Freelancing does require constant hustling. This said, you can have more control over your editorial choices, and develop a unique, independent image and standard.

The best mindset shift I made was to stop viewing freelancing as temporary. If you view it as such, or as a step down or a gap in your CV, that's what it will be - and that's how you'll treat it.

This isn't to say that you shouldn't apply for full-time opportunities. Still apply for openings that fit within your natural career progression - as you are ultimately a stronger candidate if you approach the job from that direction.

I also stopped using the phrase "outlets I freelance for". I refer to these outlets as my clients. This has placed more control in my hands, while also building self-confidence.

Pay and consistency

Pay rates are important, but consistency is even more so. Having regular clients provides me with some stability, while also allowing me to pitch and write more ambitious articles.

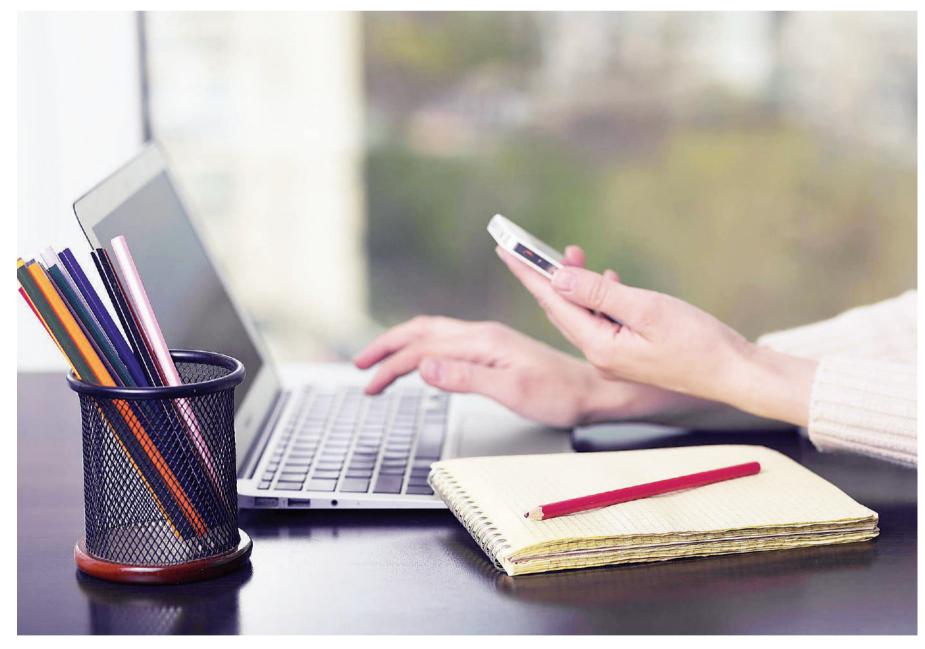

Cultivate a relationship with an outlet through which you can receive a more reliable amount of work. I call this my "anchor gig". This doesn't have to pay great, but it allows you a base you can build off.

My "anchor gig" is literally working as an anchor for a nationally syndicated programme called Business Brief on behalf of a startup.

"I find I always feel most comfortable and most financially stable when I have at least one or two places that I write for that are going to give me regular work," said New Orleans-based writer Thor Benson.

Benson elaborated: "Sometimes that means taking a gig that doesn't pay really well but you are going to get a lot of work from them. Having that foundation is important, and then you try to get as much work on top of that as you can. Some months you get a lot of work and some months you don't."

For some freelancers, their main client can change month to month or quarter to quarter. "Right now I have a stable of clients who I can go back to for work, who pay my rates, who give me interesting projects. Who my staple client is changes month by month and quarter by quarter," said Seattle-based journalist Wudan Yan.

Gathering clients

From here, I organise my clients using a tier system. 'Tier two' outlets are ones I can rely on for fairly regular work -maybe a piece or two monthly, each. I have about half a dozen outlets that fit this description.

On 'tier three' are outlets that might sometimes take my pitches, but not consistently. And 'tier four' are the reach outlets - publications I'd love to have a byline in, even just once. As you freelance more, consider developing your ex-

pertise in certain beats. This can make you a go-to writer that outlets proactively turn to when in need of a story on a topic.

There are a lot of solid political reporters out there, but not as many who cover housing, for instance. There are

many business reporters covering corporate corruption,

but not as many covering the troubled teen industry.

Finally, as you gather clients, consider subscribing to newsletters like Opportunities of The Week and One More Question that send out lists of editors who are in search of pitches.

Independent revenue streams

Establishing independent revenue streams provides you even more control over your situation.

Yan's independent revenue streams have been a suc-

cessful and sustainable part of her professional career. She co-hosts the podcast The Writers' Co-op with Jenni Gritters, which is intended for freelance creatives, while

also running a career coaching business.

"I have really become my own anchor client because Jenni and I make revenue through the Writers' Co-op, and I make revenue through my private coaching business," said Yan.

Many writers today use Substack for newsletters, while others have chosen to use platforms like Revue, Ghost and Patreon. For some of my broadcasting work, I use a platform called Happs, through which viewers can pay subscriptions to streamers directly.

"I love the security of having a project that is 100 per cent under my control. No one can fire me from my newsletter, no one can lay me off from my newsletter that is going to be there no matter what, and I built that from the ground up myself," said writer Britany Robinson of her One More Question Newsletter.

You will likely experience slow periods when commissions are limited. While not universal, freelance budgets are most limited at the end of a quarter, especially during the holidays and early in the new year.

This is a good time to put together projects, say a newsletter, that will bring in some profit in the long term. During my most recent slow period I put together evergreen

content for two newsletters I run.

Freelancing is not for everyone, but it can be a rewarding alternative to a newsroom staff job. If you're savvy and know how to hustle, you can flourish.

As one of my mentors, former CNN Tech Correspondent and the founder of Dot Dot Dot Media Laurie Segall, once told me: "Journalism isn't for the faint of heart. It's not something you phone in. If you are obsessed with this kind of work you are doing the right thing." For freelancers, this sentiment is amplified.

• A dispatch by International Journalists' Network (IJNet), a project of the Washington-based International Centre for Journalists. Andy Hirschfeld is a New York City-based reporter focusing on cost of living issues. He writes for various publications including Al Jazeera English, Observer, OZY, Salon and CNBC.

Songas: Workplace health, safety excellence is everyone's business

By John Maitaria

HEALTH and safety risks occur in different workplace settings, from plant operations to construction sites and even offices. Employers are required by the Occupational Health and Safety Act No.5 of 2003, to create a workplace free of hazards for their employees and any third parties on site. The key to a safe working environment is to anticipate, mitigate, prepare and continuously raise awareness hence minimizing work hazards.

At Songas we believe all accidents are foreseeable and preventable and if an incident does occur, we conduct rigorous root cause analysis and use this to support continual improvement in our occupational health and safety systems. It is for this reason that at the end of 2020 Songas family achieved an outstanding over 4 years -1527 days of No Lost Time Accidents (LTA).

According to the International Labour Organization (ILO), every day, people die as a result of occupational accidents or work-related diseases - with an overwhelming total of 2.78 million deaths per year. Additionally, there are some 374 million non-fatal work-related injuries each vear. A 2013 Performance Audit Report on the Management of Occupational Health and Safety in Tanzaniare counted a total of 121,000 fatal injuries. This staggering statistic underlines how imperative it is to strengthen our efforts across all industries to ensure employee safety, health, and wellness.

The lack of safety and protection of employees carries greater financial implications beyond the question of safety alone. Workplace accidents create a ripple effect that can influence immediate and long-term business impacts. The ILO estimates that lost working time, workers' compensation, interruption of production, and medical expenses cost four percent of the global GDP (roughly 2.8 trillion US dollars) thus showing the economic burden of poor OSH practices.

Songas believes that safety programs are a good investment to ensure all employees are aware of safety and hazard measures to reduce the level of impact and achieve workplace safety excellence. Safety excellence goes beyond repeating great results. It is an insight into how the results were achieved, with a shared mindset throughout the culture that continuous improvement is, and will always be, possible.

Since 2004 Songas has established a Health, Safety and Environment team that provides awareness training, campaigns, and weekly meeting logging over 2,326 hours, aiming to build a culture where safety comes first. As a result of this dedication, we recently achieved certification to the latest international occupational health, safety ISO 45001:2018 as well as maintaining certification to ISO 14001:2015 an environmental management

This verifies that the company has successfully adopted an effective safety management system in conformity with international standards.

Our employees are the most valuable resource and our top priority is ensuring that every worker returns home safely at the end of the day. The celebration of World Day for Safety and Health at Work poses as a reminder to executives at corporate headquarters and workers in the field-that safety doesn't just happen, it is a choice that must be lived and practiced every day, across every business segment.

The recent outbreak of the Covid-19 pandemic reminded all of us that we each have a responsibility to develop preventative cultures in our homes, schools, and the workplace in order to prevent or curtail the spread

As a company we put in place the safety regulations required by the World Health Organization (WHO) with regards to the management of Covid-19 by installing handwashing stations, distributing hand sanitizers and masks among employees, and encouraging working from home whenever deemed necessary.

We remain committed to enhance employee engagement and constant communication around health and safety practices and focus on establishing safety partnerships and innovative new resources to create a culture of safety excellence at Songas.

Her Initiative, Serengeti Bytes launch Kiswahili digital forum

By Guardian Reporter

DAR ES SALAAM-based-Her Initiative organisation in collaboration with Serengeti Bytes has launched a special Kiswahili digital forum which is aimed to support girls and young women with essential skills and resources to run their businesses and thus improve their income

Dubbed 'Panda Digital' the platform will bring together young entrepreneurs from every corner of the country; build their capacities through equipping them with cross-cutting business issues and linking them to the various funding opportunities.

Lydia Moyo, executive director of Her Initiative, said in a statement yesterday that the digital platform will focus mostly in empowering and equipping girls with skills that will help them generate income which includes initiating small and big businesses.

According to her, this will stimulate young women's participation in the digital economy.

She said the organization strives to reframe the value of girls, shape the new norms that break poverty, and create financial resilience among girls and young women in the country.

"The Panda Digital platform is also expected to be a special database for girls and women entrepreneurs from all regions in the country. It will also be a platform for young entrepreneurs to advertise their products and services and thus grab more market," she said.

Moyo said that in the platform, there will be a number of courses to improve business skills such as online mar-

keting, customer care, business branding and products packaging as well as how to overcome various challenges in business.

"As we are launching, the course which is available is online marketing and we have already uploaded it to the platform," she said.

She said that the online marketing course consists of 12 lessons and a section of questions and answers which is attached after completing one lesson. This aims to help entrepreneurs gain more understanding.

She urged young women and girls to join the platform and utilize well all the opportunities listed in it so as to transform their economic status.

"Through the platform girls and young women entrepreneurs can access a variety of business opportunities by pressing on the button labeled 'opportunities' where they can access funding opportunities and other training as per their needs," Moyo added.

Publisher spend: A bigger focus on the newsroom

Editorial and content production now make up one-third of news organisations' costs, according to WAN-IFRA's (World Association of News Publishers) recently published World Press Trends Outlook report, writes Simone Flueckiger.

The costs of the news business have shifted during recent years as publishers have been adopting digital transformation as a core strategy. One-third of costs now coming from Editorial.

Twenty or even ten years ago, nearly 50 per cent of publishers' costs came from print production (particularly with newsprint) and distribution. This has since dropped to 21.4 per cent.

Instead, editorial and content production now make up a third of total costs. And while editorial making up the majority of investment is encouraging to see, the figure is actually lower than what typically accounted for the costs of producing news ten or twenty years ago when it stood at around 35 per cent.

Much of that is due to the drastic cuts newsrooms have experienced in regions such as the US or the UK, for example, during the past decade - and more so recently.

But it is also due to the increased investment in tech - data, product development - that works hand in hand with editorial and is often embedded in newsrooms, and has gained importance as publishers increasingly adopt reader revenue and audience-first strategies.

However, as with every finding in World Press Trends, the market situation, regional factors, company culture, and strategic focus can, naturally, vary widely.

Take the Globe and Mail in Canada, for instance. The company has been bullish on digital transformation for years now, but also innovating in print. Its cost structure reflects that.

"Our printing, newsprint and distribution bill is 38 per cent of total costs, and that's significantly less than what obtained five years ago, when we made a determined drive to eliminate unprofitable delivery routes and make sure that we weren't losing money on print," said Globe and Mail CEO Phillip Crawley.

He elaborated: "Our distribution costs as a national newspaper in a very large country with only 36 million people are probably higher than most.

"The other big difference is that our Editorial costs are only 20 per cent of the total. That doesn't count custom content which is a growing source of revenue, and is run out of Advertising.

"We have held the Editorial budget, for staff and freelance, at about the same level for the last several years. We have about 220 full-time journalists. Twenty years ago that would have been 300-plus.

"Otherwise our costs are similar to your chart, although our expanding workforce supporting data science and digital, including our Sophi analytics and automation products, means that category of expense is rising each year."

Forty-four per cent of respondents said accelerating their digital transformation strategy was the most important change they needed to make moving forward.

"Digital transformation" is an overarching strategy for most companies but the specifics of that are increasingly audiences-first, reader revenue, data and product development.

It is no coincidence that the three next most important changes for 2021 mirror those of top investment plans: accelerating reader revenue plans, the same for data analytics, and more tech investment.

News executives don't consider the short-term impact of the Covid-19 pandemic as the biggest risk to their organisations' future success. Instead, the respondents to our survey said their organisation's greatest threats are the ongoing decline of news publishers' share of the advertising market, 30.6 per cent, (in which the pandemic plays a key role naturally) and their organisations' inability to diversify revenues (21 per cent).

Forty-three per cent of respondents from our WPT Publishers Outlook survey said their revenues declined by more than 20 per cent "in the last 12 months"; another 7 per cent said theirs declined by more than 10 per cent.

On average, overall revenue was down by 11 per cent, publishers reported. However, 17 per cent of publishers reported an increase in revenues last year, according to our Outlook survey, with 11 per cent actually saying revenues were up more than 20 per cent.

Digital circulation revenue has been a positive development for many news organisations as publishers report a 26.9 per cent YoY (year-on-year) increase in 2020. While that figure is impressive, it's worth noting that globally the industry is still predominantly dependent on advertising and print revenue: Digital circulation revenue makes up just 6.1 per cent of publishers' overall revenue (core revenue streams).

According to our Outlook survey, 65 per cent of publishers believe that their business will fully recover from the Covid-19 pandemic; 35 per cent don't.

Nearly 60 per cent of publishers (Outlook) say their staff will either work from home or have the option to work from home going forward. Only 5 per cent of our respondents expect to move everyone back to the office and 16 per cent believe that they'll use less real estate going forward.

For the first time in our survey, we asked publishers to share their general cost allocation across the business, and Editorial was the single largest expense, accounting for just over one-third of all costs (33.5 per cent). Print production costs make up just 21.4 per cent.

Those are just some of the findings. Naturally, World Press Trends delves into some of the key issues that are driving the industry. Our World Press Trends database features historical data dating from 2005-2017.

INVITATION TO TENDER

REQUEST FOR PROPOSALS FOR PROVISION OF STATUTORY AUDIT AND TAX SERVICES FOR TANZANIA COUNTRY PROGRAM

A. INTRODUCTION

African Wildlife Foundation (AWF) is an international conservation organization formed in 1961. Together with the people of Africa, AWF works to ensure that the wildlife and wild lands of Africa will endure forever. Headquartered in Nairobi, Kenya, AWF has field offices in nine African countries: (Kenya, Tanzania, Uganda, Cameroon, Zimbabwe, Ethiopia, Democratic Republic of Congo, Niger, and Rwanda) and is registered in the United Kingdom. Canada, Switzerland, and South Africa.

The African Wildlife Foundation ("AWF") is requesting proposals from licensed certified public accounting firms to provide statutory audit and tax services for its Kenya country program for the fiscal year ending June 30, 2021.

The RFP Document can be downloaded from the AWF website at https://www.awf.org/about/careers/request-proposal-provisi on-statutory-audit-and-tax-services

To be considered, a proposal in PDF format must be received by 5PM on May 12, 2021. Proposals should **AWF** emailed procurement at procurement@awf.org with а copy to CGuvheya@awf.org

AWF reserves the right, where it may serve the organization's best interest, to request additional information or clarifications from proposers, or to allow corrections of errors or omissions.

AWF PROCUREMENT COMMITTEE

ing for opportunities and we as TIC present them with a profile of potential projects to attract them to choose destination Tanzania," Dr Kazi noted.

Commenting on the process of land acquisition for investment and plans to establish land banks in various regions earmarked for investment, the TIC chief executive said they are collaborating closely with Ministry of Land and Human Settlement Development to ensure that investors who need land are attended to without bureaucracy both at regional and national level.

He said TIC is also working with other departments, state agencies and ministries to help investors get correct and relevant information regarding opportunities wherever they are instead of travelling all the way to the centre's headquarters in Dar es Salaam.

"We have got good corporation from Regional and District Commissioners in this regard because they have allocated us office space from where TIC staff work from in their areas because we don't presence in all regions of the country," he added.

He also explained that TIC has invested in digital technology to ensure that its services reach out to potential investors both at home and abroad but also speed up the registration process.

"Currently projects seeking registration can take not more than three days," he stated.

TIC's one stop facilitation centre has streamlined bureaucracy in processing project applications hence the exercise of providing licenses or certificates has been quick and convenient. The one stop facilitation centre has officials from Immigration, Labour Department, Tanzania Revenue Authority, Ministry of Land and Housing and Human Settlements Development and Business Registration and Licensing Agency, among others.

Dk. Kazi said TIC will start engaging with Tanzania Private Foundation Sector through different fora to get the business people's opinions on the challenges that they are facing and see how to address them.

TIC is also in contact with foreign diplomats with representation in the country to help promote Tanzania as a conducive investment destination in Africa.

TECHNOLOGY

CAG says delays in disbursement of funds affected completion of healthcare facilities

By Francis Kajubi

LACK of local purchase order (LPO) for procured construction materials to build healthcare facilities in various parts of the country resulted in the government losing 3.94bn/- for the 2019/20 fiscal year.

Controller and Auditor General (CAG), Charles Kichere said in his latest audit report that 21 out of 35 or an equivalent 60 percent of visited healthcare facilities which were under construction lacked supporting evidence for the payments made.

However, the CAG also noted that there were payments made for procured construction materials and local masons which had no evidence or justification. He further stated that 333 out of 447 of constructed healthcare facilities in the country experienced delays in completion due to the late arrival of funds.

The CAG stated that President's Office Regional Administration and Local Government Authorities (PO-RALG) did not allocate funds for

MuCoBa

A newly built Uhuru Hospital in Chamwino District of Dodoma Region.

supervision at the regional secretariats and LGAs between financial years 2015/16 to 2019/20, despite the fact that the majority of facilities are located 45 to 200 km away from LGAs centres.

According to the report, the 333 facilities is equivalent to 74 percent of constructed structures including district hospitals, were not completed within the planned time throughout the country. The CAG elaborated that 67 out of 68 of constructed district facilities, which is equivalent to 99 percent, experienced delays in completion with the average extent of delays being from 12 to 40 months.

"The hospitals were not completed within the planned cost of 1.5bn/-," the CAG added saying that it was noted that 67 district hospitals were given additional flat rate funds amounting 300mn/- so as to complete outstanding works.

In Spite of the additional funds, the CAG observed that 100 percent of the district hospitals in all 14 visited LGAs were not completed that implies that additional funds might be needed in order to complete them.

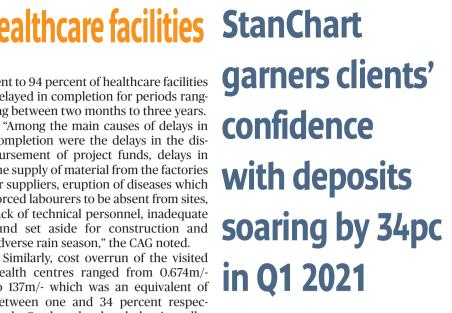

In respect to the visited 14 local government authorities, the report said 33 out of 35, an equiva-

lent to 94 percent of healthcare facilities delayed in completion for periods ranging between two months to three years.

completion were the delays in the disbursement of project funds, delays in the supply of material from the factories or suppliers, eruption of diseases which forced labourers to be absent from sites, lack of technical personnel, inadequate fund set aside for construction and adverse rain season," the CAG noted.

Similarly, cost overrun of the visited health centres ranged from 0.674m/to 137m/- which was an equivalent of between one and 34 percent respectively. On the other hand, the time allocated for the project implementation was unrealistic as it did not take into consideration the aspect of mobilization of resources and actual start of construction work.

"Lack of quality control mechanism for ongoing construction is another setback," he pointed out while adding that the majority of constructed facilities might experience either early deterioration or dilapidation.

By Property Watch Reporter

CUSTOMER confidence in Standard Chartered Bank Tanzania was at an all time high as deposits increased by 34 percent to over 1.4trn/- during the first quarter of this year.

In its results for the period ending March 31, 2021, the Dar es Salaam based lender said the deposits growth cuts across its corporate and individual banking segments. StanChart Tanzania's Chief Finance Officer, Rayson Foya attributed the customer deposits growth also to increased accessibility of the bank's products and services thanks to investment in digital platforms.

"We have continued to see increased banking activity through our digital platforms whereby both corporate and individual clients are able to transfer funds onto their accounts through the Straight2Bank platform for corporate clients and the Full Digital Bank on Mobile for our individual clients," Foya

He said the growth in customer deposits has directly resulted into an increase of the bank's total assets by 25 percent from 1.559trn/- to 1.95trn/- during the period."Currently over 90 percent of our clients' banking transactions are done digitally. This is mainly due to the convenience, speed and efficiency that's made possible by transacting through digital capabilities," Foya added.

The CFO further noted that as for performance of loans and advances, the bank maintained its lending activities to both corporates and individuals despite a challenging lending environment during the period.

"We continue to be guided by our brand promise, here for good, and despite challenges experienced during the period by some of our clients, we have continued to work closely with them, analyzing their business trends, strengths and capabilities thereby ensuring continued lending," Foya

With focussing on the bank's off-balance sheet items such as provision of guarantees and letters of credit, the bank also recorded a significant increase of 47 percent symbolising increased growth in its corporate segment activities cutting across various sectors such as trade and mega Infrastructure projects.

Last year, the government through Ministry of Finance, signed a facility agreement with Standard Chartered Tanzania for a US\$ 1.46 billion term loan financing to fund the construction of the Standard Gauge Railway (SGR) project from Dar es Salaam to Makutupora.

Foya however noted that StanChart Tanzania recorded a decrease in its operating profit by 46 percent mainly due to a one-off provision for key impaired loans. He also highlighted a slight drop on revenues which was mainly due to low interest income and the increased loan impairment experienced during the period.

Looking at the unfolding of the second quarter, Foya said that the bank will continue to leverage on its 2021 strategy which focuses on its purpose of partnering and connection people to prosperity. "Our clients continue to be the reason why we are in business, and why we are 'here for good' as per our brand promise. We will continue to work closely with clients to ensure their prosperity both from individual and corporate perspectives, Foya pledged.

We continue to be guided by our brand promise, here for good, and despite challenges experienced during the period by some of our clients, we have continued to work closely with them, analyzing their

TECHNOLOGY

ACCUSED ABRAAJ TYCOON ARIF NAQVI SELLS MANSION IN THE UK FOR MORE THAN £12M

LONDON

BRAAJ founder Arif Naqvi sold his British country estate for £12.25 million (\$17m) after being prevented from living there during his extradition battle with the United States.

Mr Naqvi was placed under effective house arrest at his London apartment two years ago after his detention at Heathrow Airport on suspicion of fraud and money laundering over the collapse of the Dubai-based private equity company.

Property ownership documents show his semi-rural retreat of Wootton Place, Oxfordshire, about 100 kilometres west of London, was sold to a prominent businessman in September last year for a £2.75m profit on the price Mr Naqvi paid in October 2006.

The home - complete with extensive grounds, cricket pitch and bordering a church in the village of Wootton - was owned, on paper, by British Virgin Islands-registered company Blondell Assets Ltd.

But the Naqvi family were wellknown residents in the attractive hilltop village. The globe-trotting Mr Naqvi, who also had homes in Pakistan, St Kitts and France, was rarely seen at the house but threw open its gates several years ago for villagers and members of Pakistan's cricket team who played a match on the private field.

Since May 2019, the tycoon has remained at his London apartment in a gated mansion block in the Knightsbridge district after posting a record bail of £15m to secure his release from prison. A judge said the strict conditions surrounding his release "effectively amount to house arrest" but they were partially eased during the months-long extradition process allowing him to visit a London mosque. He denies the charges against him.

Locals in Wootton said they had not seen any member of the family since his arrest in April 2019 and during sub-

The exterior of Wootton Place, which has been sold by Abraaj founder Arif Naqvi.

sequent coronavirus lockdowns. Days before his arrest, Mr Naqvi declined to comment on the future of Wootton Place amid local rumours of a sale.

The Rev Stephen Jones, the vicar of Wootton, said: "They literally disappeared overnight and were not seen or heard of since. It must have been more than a year ago. "When the Naqvis moved in, I was able to have some tea with Mrs Naqvi. I only met him once but I knew her very well.

"When she came, she said she wanted to help the community and used to run a regular curry supper in the village hall." The hall's roof was replaced in 2012 thanks to an "immensely generous donation" from Mr Naqvi and his wife Fayeeza, a village newsletter said.

The vicar said ownership of Wootton Place had a "chequered history" with the previous owner, developer Scot Young, dying in 2014

after falling from the window of a fourth-floor flat in London. Police believed he jumped but his former wife alleged that he was pushed on to railings below after falling foul of a Russian crime syndicate when a murky business deal went wrong.

The vicar met the current owner's wife who told him they planned to keep a low profile. Mr Naqvi, who was arrested at the London airport on his way to Dubai via Islamabad, faces 16 counts of fraud and related money laundering between 2014 and 2018.

He is accused of being the "leader of a criminal enterprise that corrupted Abraaj" and faces up to 30 years in prison if found guilty. A district judge ordered his extradition in January, a decision upheld by Home Secretary Priti Patel, a ministry representative said.

Mr Naqvi appealed and the case is set for months of wrangling before the courts. Abraaj was the largest buyout fund in the Middle East until it collapsed in the middle of 2018 after investors raised fears of mismanagement. By the time it stopped trading, Abraaj owed creditors more than \$1 billion.

Prosecutors allege he was at the heart of a conspiracy to take money from funds and falsify financial records to hide the parlous position of his group of businesses. They say that about \$250m went for the benefit of Mr Naqvi's family and other sums were used to bribe a politician in Pakistan to obtain approval for the sale of Abraaj's stake in an electrical energy utility company.

Google saves over US \$1bn a year by working from home

CALIFORNIA

WITH Covid-19 restrictions lifting, more people are booking trips and hotels online, which is very good for Google's advertising business. Google's employees, however, are working from home and not traveling as much on the company dime — and that's also good for its business.

During the first quarter, Google parent Alphabet Inc. saved \$268 million in expenses from company promotions, travel and entertainment, compared to same period a year earlier, "primarily as a result of Covid-19," according to a company filing.

On an annualised basis, that would be more than \$1 billion. Indeed, Alphabet said in its annual report earlier this year that advertising and promotional expenses dropped by \$1.4 billion in 2020 as the company reduced spending, paused or rescheduled campaigns, and changed some

events to digital-only formats due to the pandemic. Travel and entertainment expenses fell by \$371 million.

The savings offset many of the costs that came with hiring thousands more workers. And the pandemic prudence allowed the company to keep its marketing and administrative costs effectively flat for the first quarter, despite boosting revenue by 34%.

Google is notorious for perks such as massage tables, catered cuisine and corporate retreats, which have influenced much of Silicon Valley work culture. Most Google staff have worked remotely and without those perks since March of 2020. However, Google plans to return to the office later this year. Chief financial officer Ruth Porat told investors the company is planning a "hybrid" model, spacing staff less densely than before. Porat also said Google will continue to invest in its real estate across the globe.

Research exposes negative economic and social impact of offshore drilling

JOHANNESBURG

A STUDY shows that the socioeconomic impact of offshore oil and gas activities on South Africa are "unlikely to have positive benefits, either nationally or locally."

"Our research shows that the development of an oil and gas industry is likely to further entrench South Africa as a minerals resourcebased exporter, exacerbating the negative features documented by the National Planning Commission (NPC). We find that there is little evidence from elsewhere in Africa that the exploitation of oil and gas resources naturally leads to improvements in the lives of those living and working in oil and gas rich areas. In fact, the report reveals that it normally leads to a wholesale deterioration in living conditions for the vast majority of citizens who live and work in such areas," says Gillian Hamilton, the Green Connection's economic researcher.

The report cites a number of examples, including Nigeria, Uganda, and Mozambique, where the only real beneficiaries were the companies that were awarded the drilling rights and corrupt government officials, while the surrounding communities were left to suffer devastating environmental impact and governments were left in more debt as a result of the projects.

"Operation Phakisa, launched in 2014, was designed to boost economic growth and create jobs within the context of the government's National Development Plan (NDP). One of its focus areas is the oceans economy. But rather than focus on the stewardship of the ocean and the sustainable use of these resources, Operation Phakisa seems to have prioritised the establishment of a potentially devastating offshore oil and gas industry," says Hamilton.

She says that it was predicted that government's "fast results delivery programme" would contribute R177bn to South Africa's GDP, and create one million jobs by 2033, but it has far from delivered these economic gains. However, the contribution of the oceans economy to South Africa's GDP has declined as a percentage of GDP, from 4.4% (R110bn) in 2010, to 4.2 % (R130bn) in 2019.

Overstated gains

An economy-wide model to determine the economic impacts of oil and gas, was developed by Wait et al (2015). It indicates that a 20% short or long-run increase in the production of crude oil, petroleum, and gas in the country will increase real national GDP by 0.15% in the short run, while decreasing GDP by 0.12% in the long run. This decrease in real GDP raises concerns around the economic viability of South Africa investing in an oil and gas industry.

"The model points out that investment in the country's oil and gas industry will not deliver significant tax revenue for the fiscus. In the short term, it may form a platform for job creation and employment, with minor wage increases, but only if the capital equipment necessary for extraction is produced in South Africa. A report by Standard Bank, that assumes an oil price of \$110/per barrel of oil, notes that 20,500 skilled and 33,000 unskilled jobs would be needed to service the oil and gas sector. However, it is more likely that in the long run, real wages will decrease marginally and there will be a long-term shift to skilled rather than unskilled labour," says Hamilton.

She says that multiple studies show that the oil and gas industry's promises of job creation from the drilling of natural gas have been greatly exaggerated. Many of the jobs that are created are short lived or have gone to out-of-area workers who have the necessary skills. In addition, up to 75% of workers will likely become redundant in the future due to automation. The gender-bias of the oil and gas industry - with only 3.6% female representation amongst the total offshore workforce - should also be noted.

Saudi Arabia's Red Sea tourism project secures \$3.76bn in green financing

RIYADH

THE Red Sea Development Company (TRSDC) secured 14.12 billion Saudi riyals (\$3.76bn) in funding through the first locallydenominated Green Financing credit facility.

The developer raised the capital through term loan and revolving credit facilities from four banks in Saudi Arabia to fund construction of the multibilliondollar tourism project on the west coast of the kingdom, it said in a statement on Tuesday. Banque Saudi Fransi, Riyad Bank, Saudi British Bank and Saudi National Bank were part of the financing deal.

"This is another milestone for the Red Sea Project and Vision 2030," Jay Rosen, chief financial officer at TRSDC, said. "This financing adds another level of credibility by having the banks support the project. With a fully secured capital structure our project will become more attractive to investors."

The Green Financing accreditation granted to the project shows it is in line with a framework set out by the International Capital Markets Association and the Loan Market Association's Green Loan Principles and Green Bond Principles, the statement said. HSBC acted as green loan co-ordinator on the transaction.

The green funding framework allows TRSDC to issue more green loans and other debt instruments. It also strengthens the participating lenders' environmental, social and governance credentials, the company said.

Saudi Arabia is developing several ecologically-focused mega projects to develop its tourism industry as part of efforts to reduce its reliance on oil and diversify

The location of some of the overwater villas at Saudi Arabia's Red Sea Project.

foreign direct investment - a central plank of the kingdom's Vision 2030 economic reform agenda into tourism and leisure projects across the kingdom.

TRSDC's masterplan covers a 28,000 square kilometre site containing 90 islands. Set to welcome its first visitors by the end of 2022, the project is expected to be completed by 2030. It will house 50 hotels containing 8,000 rooms, a luxury marina, entertainment and leisure facilities upon completion.

The company, which is owned by the kingdom's Public Investment Fund, is developing 16 hotels with 3,000 rooms across five the economy. It seeks to attract islands and two inland sites as

part of the first phase that will be delivered by 2023. This phase is expected to cost up to 29bn riyals to finish.

"The scale of this project is unmatched anywhere in the world and we are setting new standards in regenerative tourism at every turn. It is this pioneering approach that has helped us secure the first ever riyal-denominated green finance credit facility," said John Pagano, chief executive of TRSDC.

The project has already achieved significant construction milestones, with more than 500 contracts worth 15bn riyals

signed so far, the company said. In January, TRSDC picked

Dublin-based DAA International to operate the project's international airport. The group's international airport management business will provide airfield and terminal operations, aviation services, facilities management and commercial activities. DAA International already operates Terminal 5 at King Khalid International Airport in the kingdom's capital, Riyadh.

The entire transport network at the Red Sea development site, including the airport, will be powered by renewable energy. Acwa Power will provide 100 per cent renewable energy for phase one under a public-private partnership agreement.

Joe Biden's first 100 days in office marred by border surge

WASHINGTON

NEARING 100 days in office, U.S. President Joe Biden is tasked with handling a crisis on the U.S. southern border that shows no signs

Migrants are illegally pouring over the U.S. southern border, and unaccompanied children are surging through at record levels.

Critics call it a humanitarian disaster -people are being crammed into places like the one in Donna, Texas, which is supposed to house a few hundred people under COVID restrictions, but now houses 4,000.

The Biden administration is scrambling to contain the problem, which critics blast as a major blight on the new president's first 100 days in office.

"I think that it is clear that it has become a crisis ... in terms of the conditions that some migrants, particularly children, are being held in," Jessica Bolter, a policy analyst at the Migration Policy Institute, told Xinhua.

Brookings Institution Senior Fellow Darrell West told Xinhua: "It is a complicated issue for the administration," adding that while Biden wants to treat people humanely, he "doesn't want a flood of new people crossing illegally.'

Some experts said that a host of issues, including hurricanes, poverty and violence, are contributing to the surge. But others maintain the problem is because Biden has changed border policies.

"Biden's first 100 days have been an allout aggressive assault on America," Republican Strategist and TV news personality Ford O'Connell told Xinhua, adding that the border crisis is one that Biden himself created.

"Democrats see this as a two-year window to transform America into a progressive state," O'Connell said.

In a recent OP-ED on Fox New's website, Sen. Thom Tillis noted that he saw with his own eyes during last month's visit to the border "the surge of unaccompanied minors, the subpar living conditions of migrants, and the state of an overworked and overwhelmed Border Patrol."

He added that these have "been direct consequences of the Biden administration's failed policies."

"Through their words and actions, the Biden administration sent a clear signal that our border is open for anyone and everyone, and the world took notice," Tillis argued.

Mexico's President Andres Manuel Lopez Obrador also chimed in recently, arguing that "expectations were created that with the government of President Biden there would be a better treatment of migrants.

And this has caused Central American migrants, and also from our country, wanting to cross the border thinking that it is easier to do so." For its part, the White House said it's seeking a fix that can involve both parties.

WHAT MIGRANTS WILL FACE

Once they have crossed the border, Bolter said, there are different processes for single adult migrants, those traveling as families, and unaccompanied children to go through.

According to the expert, for single adults, most -- 87 percent in March -- are immediately expelled to Mexico or another country.

Those who aren't first processed by border authorities are then transferred to U.S. Immigration and Customs Enforcement (ICE) custody and placed in removal proceedings before an immigration court.

Most are detained in immigration detention while they are in immigration court pro-

U.S. President Joe Biden

ceedings, but some may be released for humanitarian reasons.

For families, less than half -- 33 percent in March -- are immediately expelled to Mexico or another country.

Those who are not expelled are processed by border authorities in a facility like those in Donna, Texas, Bolter noted. Some are placed into expedited removal proceedings and briefly detained in ICE family detention facilities before being either removed or released to seek asylum.

Others are placed into longterm removal proceedings and quickly released into the community for the duration of their immigration court proceedings, he explained.

From there, NGOs typically help released families arrange travel to reunite with family or friends in other parts of the United States, Bolter noted.

For unaccompanied children,

they are not being immediately expelled under the Biden admin-

Once they have been processed by border authorities, they are transferred to the custody of the Office of Refugee Resettlement (ORR), which is within the federal Department of Health and Human Services, Bolter said.

They are transferred to one of three types of facilities, ranging from smaller facilities with extensive services available, like case management and education, to larger, emergency facilities with services limited to meals, basic health care, and minimal recreation, Bolter said.

For children held in all these types of facilities, the goal is to release them as quickly as possible to a sponsor (most often a relative) in the United States whom they can live with while they go through proceedings in immigration court, Bolter noted.

2020

China works to ensure everyone benefits from its rapid development

WHILE Fuxing bullet trains, the state-of-the-art high-speed trains of China, are running on the country's continuously expanding high-speed railway network that might reach 40,000 kilometers in the near future, 81 pairs of no-frills slow trains are carrying 12 million people each year to and from a number of obscure stations at fixed and low prices.

These slow trains normally run less than 40 kilometers per hour and offer cheap tickets throughout the year. What they transport are not only passengers from underdeveloped areas, but also these passengers' livelihood and dreams.

The galloping bullet trains and unhurried no-frills carriages pose a sharp contrast that presents the "tenderness" of China's rapid railway development.

Apart from the slow trains, China has launched massive other public service projects in multiple fields tailored for special groups, from the communication base stations set up in deep mountains to the stable supply of orphan drugs, and from the efforts made to redesign internet applications for the aged to improving the security system for children living in difficulty

These pragmatic measures, aiming at tackling livelihood problems in a targeted manner, have enhanced people's sense of fulfillment, happiness, and security. It mirrors a fact that China in the new era, is attaching huge importance to leaving no one behind the speed of development, but also the warmth

The warmth of development means that no one shall be left behind during the country's development.

Amid COVID-19, China has always put people and their lives above everything else and done everything to save the patients. In the country's fight against poverty, the Chinese government tailored targeted measures that covered all impoverished population. Besides, when building a moderately prosperous society in all respects, China also made sure that everyone would benefit from the process and results.

To improve livelihood, enhance people's wellbeing and pursue common prosperity is a remarkable advantage of the socialism with Chinese characteristics.

The warmth of development comes from the country's concrete actions to solve problems for its people. China believes that livelihood issues are never trivial. During COVID-19, health QR code was widely applied to identify residents' health conditions in public places. In the meantime, channels that didn't require QR code credentials were also established to serve those who were unfamiliar with smart phones. The country's 14th Five-Year Plan also proposed to make public facilities accessible

Today, more and more local authorities in China are issuing specific and targeted measures to service special groups and

The warmth of development demonstrates that China never overemphasizes immediate benefits. Obviously the country is losing money in running the no-frills slow trains, but these rail lines can lead the people along the tracks toward prosperity.

Remote villages don't have a large population, but communication base stations are still erected there, as the country believes that the wellbeing of the people shall not be calculated by economic numbers. People's Daily

Xi says countries should bear in mind shared interests of mankind and make responsible, wise choices

"CHINA calls on all countries in Asia and beyond to answer the call of the times, defeat the COVID-19 pandemic through solidarity, strengthen global governance, and keep pursuing a community with a shared future for mankind," said Chinese President Xi Jinping in a keynote speech delivered via video link at the opening ceremony of the Boao Forum for Asia Annual Conference 2021 on April 20.

In the speech entitled "Pulling Together Through Adversity and Toward a Shared Future for All", the Chinese leader also elaborated upon Chinese proposals for advancing high-quality Belt and Road cooperation, pointing out the direction for surmounting the current crisis and achieving development and prosperity for Asia and the entire world.

"While we live in an age rife with challenges, it is also an age full of hope," Xi said, noting that the combined forces of changes and a pandemic both unseen in a century have brought the world into a phase of fluidity and transformation and that instability and uncertainty are clearly on the rise.

As global challenges require responses from all countries, the call for upholding multilateralism and enhancing communication and coordination has grown stronger.

However, mounting unilateralism and protectionism are threatening world multi-polarization and economic globalization.

"Where should humanity go from here? What kind of future should we create for future generations," Xi asked, considering these important questions a test of humankind's wisdom.

China's solution to these questions is building a community with a shared future for mankind.

Countries need consultation on an equal footing to create a future of shared benefits, openness and innovation to create a future of development and prosperity, solidarity and cooperation to create a future of health and security, as well as commitment to justice to create a future of mutual respect and mutual learning, Xi stressed.

It is generally acknowledged by the international community that China's proposals bear great significance for guiding people through the fog blanketing humankind and helping them find the right way forward.

In response to the countercurrent of unilateralism, China proposed following the principles of extensive consultation, joint contribution and shared benefits, upholding true multilateralism, and making the global governance system fairer and more equitable

In this age of economic globalization, openness and integration is an unstoppable historical trend. Attempts to "erect walls" or "decouple" run counter to the law of economics and market principles. They would hurt others' interests without benefiting one-

To combat vaccine nationalism, China believes it important to bolster international cooperation on the R&D, production and distribution of vaccines and increase their accessibility and affordability in developing countries so that everyone in the world can access and afford the vaccines they need.

As regards the rise of a new "Cold War" and ideological confrontation, China pointed out that countries must advocate peace, development, equity, justice, democracy and freedom, which are common values of humanity, and encourages exchanges and mutual learning among civilizations to promote the progress of human civilization.

China's proposals and practices have been echoed and highly praised by politicians and officials from foreign countries during the conference.

Chilean President Sebastian Pinera expressed admiration for China's efforts to increase the production of COVID-19 vaccines so that they can benefit people in other countries while serving the Chinese people.

As long as countries adhere to the path of globalization, uphold the principles of openness, inclusiveness, mutual benefit and win-win result, and strengthen mutual trust and support, they can absolutely create a better world and a closer community with a shared future for mankind, said Thongloun Sisoulith, President of Laos.

By promoting joint construction of the Belt and Road Initiative (BRI), China has put the idea of building a community with a shared future for mankind into practice. Amid the unstable and unbalanced world economic recovery, various parties have shown greater expectations of high-quality Belt and Road cooperation.

Xi said China will continue to work with countries participating in the Belt and Road construction in high-quality Belt and Road cooperation and build with them a closer partnership for health cooperation, connectivity, green development, as well as openness and inclusiveness, in a bid to contribute positively to the common prosperity of humankind.

Nursultan Nazarbayev, first President of Kazakhstan, noted that the BRI has repeatedly demonstrated its viability and significance for promoting advanced cooperation concepts and globalization over the past years.

Cambodia greatly values China's attentiveness and commitment in the implementation of the Health Silk Road under the BRI, said Cambodian Prime Minister Samdech Techo Hun Sen, who believes that China's humanitarian assistance for other countries amid the pandemic bears vivid testimony of China's global leadership.

It is crucial that countries bear in mind the shared interests of mankind and make responsible and wise choices when deciding future paths, according to Xi, noting that China will stay committed to peace, development, cooperation and mutual benefit, and continue to play its part in building world peace, promoting global development, and defending international order.

Tamil Nadu SC demolishes MCC in DC Gymkhana Cup's Division A

By Guardian Reporter

TAMIL Nadu Sports Club clobbered Malabar Cricket Club (MCC) by 25 runs in the 2021 Dar es Salaam Cricket (DC) Gymkhana Cup League Division A's clash, which took place in the city early this week.

Tamil Nadu Sports Club sought to make the most of their chance to take the crease, notching 104 runs all out in 20 overs of the clash, which took place at Dar es Salaam Gymkhana Club (DGC) venue.

Opener, Praveen Kumar, and fellow top order batsman, Nirmalkumar Balakrishnan, were so far the batsmen, who put performance that was worth writing home about in the innings.

Kumar was Tamil Nadu Sports Club's top run getter in the innings, ending with 34 runs, Balakrishnan scored 22 runs.

The duo's solid displays came in handy for the team, effectively contributing to their club's ability to end with the imposing score.

Efforts by Ramesh Sundararajan, who had opened the innings with Kumar, to make his presence felt ended in vain given he faced early exit with six runs to his name.

Riyaz Naghoor Meeran notched 11 runs to somewhat boost his club's score.

The MCC's Nithin Thomas, Vinesh and skipper, Sreejesh Puthiyaveetil, were constant threat to Tamil Nadu Sports Club's batsmen, given the trio's skilful displays made it difficult for the latter to ultimately set up a challenging target for the former.

ultimately set up a challenging target for the former. Thomas had most wickets, he posted four wickets, leaking 15 runs in four overs.

The MCC skipper, Puthiyaveetil, sought to keep Tamil Nadu Sports Club batsmen in check with equally stellar showing, given he notched three wickets for 16 wickets in four overs.

Vinesh ended his spell with two wickets, leaking 21 runs in four overs.

Much as they were chasing a modest target of 105 runs, MCC were found wanting in batting, given they lost steam in the chase.

Vinesh was by far the batsman with significant

it out in a recent tournament, hosted by the club in Dar es Salaam.

The side suffered loss to Tamil Nadu Sports Club in a 2021 Dar es
Salaam Cricket (DC) Gymkhana Cup League Division A's tie, played in
the city recently. PHOTO: COURTESY OF MCC

contribution in the fruitless chase, which had MCC ending with $79\,\mathrm{runs}$ all out in 12.5 overs.

The top order batsman, slotted in at number three, recorded 22 runs not out, which included a four.

They experienced a shaky start to the chase following two

quick dismissals of openers Shajil Ayadathil and John David. The youthful David ended three runs short of two-digit figure,

with his score consisting of a six.

Ayadathil was sent back to the pavilion much earlier after excuting mere three knocks.

They kept on dropping wickets during the latter stages to ultimately see their hopes of realizing the chase go up in smokes.

Tamil Nadu Sports Club's Hari led his squad's bowling onslaught, given he took three wickets leaking 21 runs in four

Riyaz Naghoor Meeran and the squad's skipper, Sridhar Srinivasan, made matters worse for MCC batsmen, ending with two wickets apiece.

KMC FC in pursuit of Federation Cup last eight

By Correspondent Nassir Nchimbi

KINONDONI Municipal Council (KMC) FC's technical bench has continued to hone the team for their round of 16 match of the Azam Sports Federation Cup against Dodoma Jiji FC, which will be played at the Jamhuri Stadium in Dodoma tomorrow.

The KMC FC are continuing with the preparations, aiming at winning and advancing to the quarterfinals which will also boost their morale to seek progression to the next stage.

The outfit is eager to once again repesent the country in continental competition.

The two sides had first locked horns in Vodacom Premier League (VPL) tie in Dar es Salaam on December 4, with Dodoma Jiji FC suffering 1-0 loss.

The sides will again face each other on June 17.

Christina Mwagala, KMC FC's information officer, said the side's head coach John Simkoko and his assistant Habib Kondo are keeping on issuing their players the best techniques that will help them win and reach the quarterfinals.

The KMC FC official disclosed they will get closer to the next step, should they progress to the last eight, as their strategy is to play in the final so they can represent the country in the CAF Confederation Cup.

"If you remember in our first game we beat Kurugenzi

5-2 but we have also been strong in our Premier League matches so we are eager to go on to win, because we know when we lose we will be out of the competition," she said.

"We also realize that this step is more difficult than the one we came from because if you look at the many participating outfits, you will know they are VPL clubs."

"The teams know each

other and that is why we have decided to prepare well, seeking to do well and win the championship," she noted.

She disclosed the club's preparations are further

preparations are further targeting to make sure they shape up for their upcoming Premier League matches as they have not had very good results in their second round away matches.

In the away clashes, KMC

FC settled for draw with Mbeya City FC, Coastal Union and Yanga while losing to Tanzania Prisons.

The situation forces them

to see to it they prepare well as all they want right now is notching good results in all of their remaining away matches as well as those, which will take place at home.

"We have had very good results in our home matches and the players have shown a good level so the technical bench plans are to ensure this quality is maintained all the way."

"I therefore can assure you that we will fight to get three points in every game ahead of us," Christina said. **SPORTS**

Man City get big-time performances from their big-time players

By Julien Laurens, ESPN Correspondent

"A GAME of two halves." Rarely in Manchester City's history has this expression made so much sense.

Like they were in Dortmund, in the quarterfinal second leg when they were 1-0 down at half-time and facing the prospect of a disappointing Champions League exit, Pep Guardiola's players were behind against Paris Saint-Germain in the French capital on Wednesday in their semifinal first leg. Deservedly behind, too. The Parisians were too good for City's press, buildup and movement. But again, like all great teams do, they fought back.

Man City showed their character and found a way of not just getting back into the game, but forcing PSG into mistakes that cost them two goals. From being almost unable to create anything in the first 45 minutes, which was so unlike City, the second 45 minutes were everything this team is about: intensity, pressure, aggression and intelligence. Suddenly, it was PSG who were unrecognisable.

The Premier League leaders played much higher up the pitch, finally got full-backs Kyle Walker and Joao Cancelo involved, and Kevin De Bruyne was more prevalent. They took the ball away from PSG, preventing them from playing out from the back as well as they did in the first half. Without the ball, there is not much Marco Verratti, Neymar and Kylian Mbappe can do. City made them chase after the ball instead of having it at their feet, and it made all the difference in a 2-1 victory.

The character showed by Guardiola's players to come back into this game, to boss the second half in the way they did, is deserving of high praise. And when you are on top but still trailing 1-0, you need your best players to step up -- and City's did.

This was a special night for Riyad Mahrez. He was back home, in Paris, where he was born and raised. The Parc des Princes is a stadium he used to visit when he was younger to watch Les Rouge et Bleu, and playing there now, for the first time in his career, was always going to be very meaningful. Before this first leg, he would have dreamt of playing a key role in this clash. And he did, just as he did against Borussia Dortmund (an assist at home, a goal away) and Borussia Monchengladbach (scoring in the second leg of their round-of-16 tie). His performance on Wednesday, scoring the winner and being a constant threat, was one of his best since joining Manchester in 2018.

This year, the Algeria international has been one of City's key contributors, alongside Ilkay Gundogan, Ruben Dias, Phil Foden and De Bruyne. Of course, De Bruyne.

This was a special evening for the City captain. Until last weekend, there were doubts about whether he would be fit for this game. The ankle injury he suffered against Chelsea 10 days ago in the FA Cup semifinal loss put his participation in this first leg in jeopardy. For a while, he and Guardiola indicated they didn't think that he would be able to play. And after a pretty anonymous first half, De Bruyne stepped up after the break, even if, as he admitted himself, his goal was rather fortuitous.

"They are an unbelievable team with great players up front," he said after the match. "We pressed them differently after 30 minutes and we put them under more pressure. Then we played great in the second half, even if we are a bit lucky on our first goal. What changed in the second half was that we played more with the ball. It was too rushed in the first half. We tried to go forward too quickly, which is not our game. We tried to find space more patiently, and we did.

"We kept going after the first goal, but there is still a game to go, so we have to focus. We know we will suffer. We know how good they are. We know we have to work hard for the team at times, it will be the same in the second game."

Mahrez and De Bruyne led the way, City went for it, and their character and mental strength made the difference. They forced the Parisians into mistakes. Keylor Navas should have done better on De Bruyne's cross-turned-shot, and only Presnel Kimpembe and Leandro Paredes know what on earth they were doing in the wall on Mahrez's free-kick goal. Naturally, Guardiola was a happy man after the game.

"The second half was excellent in every department," he explained. "We need time to be more ourselves. In the first half, we didn't play free. In Dortmund, we conceded a goal first and then we came back, like tonight. I want us to be ourselves. We can only play in one way so we have to get it right."

If PSG lost their way and their focus, as we saw with Idrissa Gueye's red card, it is because Manchester City took the game away from them. In the second half, the hosts threw away everything they had worked so hard to create in the first. Marquinhos' goal made history as the centre-back became only the third player in history to score in the Champions League quarter-finals and semifinals two seasons in a row, after goal-scoring greats Cristiano Ronaldo and Antoine Griezmann. It was not enough on Wednesday. But there is still a second leg for PSG to turn things around.

"We have to believe and go there to play, score goals and win," PSG boss Mauricio Pochettino said after the game, ruing the "two accident goals" his team conceded. "It is difficult to accept. It is painful that it happens in a Champions League semifinal."

Travelling to Manchester has been happy hunting for PSG, having won their past two Champions League trips there, including earlier this season. Those results came in the red half of the city, though. Can they do the same on the blue side of town?

Message from the Board Directors, Financial statements. On 01st August 2020, Mwanga Community bank Limited (MCB) ,Hakika Microfinance Bank Limited(HMB) and EFC Tanzania Microfinance Bank (EFC) completed the merger of the 3 institutions to form Mwanga Hakika Microfinance Bank Limited(MHB); the transaction was accounted for in accordance with IFRS3-Business combinations. On 1st August 2020 the amalgamation was achieved by transfering the business and net assets of EFC and HMB to Mwanga Hakika Microfinance Bank Limited(MHB). The financial statements of the bank are prepared on a prospective basis(a continuation of MCB), representing the 3 months performance of merged bank (MHB), prior year comparatives are those of MCB only. The consolidated financial statements are also a continuation of the financial statements of MCB with an adjustment of capital to reflect the legal capital of EFC and HAKIKA. The prior quarter comparatives are those of MCB only.

Man City get big-time performances from their big-time players

COMPREHENSIVE REPORT, PAGE 19

Children with intellectual disabilities take part in volleyball training in Dar es Salaam recently.

Azam FC now installs LED lights at Azam Complex

By Correspondent Joseph Mchekadona

TANZANIA's football giants, Azam FC, have now turned out to be the first East African football team to have Light Emitting Diode (LED) lights at the outfit's stadium, Azam Complex, in Dar es Salaam.

Azam FC's information officer, Thabit Zacharia, disclosed the development on Wednesday, saying they are committed to developing football both on and off the field in the country.

Thabit said installation of the LED lights will take two to three weeks and it will go along with installing digital advertising boards (LED display parameter board) at the venue.

He disclosed this will attract many top teams around the globe to use Azam Complex for either matches or training.

He said LED lights will improve the way spectators watch matches at night at the venue as the lights produce light up to 90 percent than bulbs which many domestic stadia have in the region.

"After renovation of the pitch, we are now removing the common bulbs and replacing them with LED , the LED lights are used at top stadiums around the world, the lights which were used during Paris St. Germain (PSG) encounter against Manchester City in UEFA Champions League yesterday (Wednesday) were LED, I'm sure we are the first football club in East Africa to have those lights," he said.

According to information, LED lights produce light up to 90 percent more efficiently than incandescent light bulbs and offer a tremendous opportunity for innovation in lighting form factors and fit a wider breadth of applications than traditional lighting technologies.

The LED lights are also said to absorb heat and dissipate it into the surrounding environment, thus making it comfortable for players to play on the pitch.

He also said the LED display parameter board will help the club generate revenue as the corporate world can place their adverts easily.

In modern football's advertising and marketing, the display parameter boards are ideal compared to the old model of using permanent painted advertising billboards.

The FIFA and Confederation of African Football (CAF) rules and regulations do not allow clubs to stage matches at venues that infringe sponsors and partners' rights.

It is said CAF or FIFA matches are to be played at a stadium that is free of fixed adverts, as those with fixed adverts may have adverts which infringes on the sponsors' exclusive rights.

Many stadiums in the country lose out in advertising due to their archaic advertising medium as they depend on permanent painted advertising billboards instead of digital perimeter boards.

TPLB now slaps fines on Simba SC defender, fans for violent conduct

Simba SC defender Ibrahim Ame. PHOTO: COURTESY OF SIMBA SC

By Correspondent Nassir Nchimbi

THE Tanzania Premier League Board (TPLB) has fined Simba SC 500, 000/- for violent acts witnessed during the side's league clash against Gwambina FC, which took place in Misungwi, Mwanza on April 24.

The punishment comes at a time Simba have been in good form as they have picked up six wins since they shifted to focus to the domestic competitions.

"Simba have been fined 500,000/for violent acts exhibited by its supporters who threw empty bottles into the pitch. The actions saw the police swiftly act in order to restore sanity before the game was allowed to proceed thereafter," the board noted in a statement.

The statement noted: "The violent conducts occurred during the Gwambina game on April 24 at Gwambina Stadium in Mwanza. The fines have been meted on Simba based on the provisions of Premier League regula-

tion number 45(1)."

Additionally, Simba SC defender Ibrahim Ame has been banned and fined for obstructing a match official during the same game.

He will miss his club's league clash against Yanga, set to take place on May 8, as well as clashes against Coastal Union and Azam FC.

"[Ibrahim] Ame of Simba has been banned from taking part in three games and a fine of 500, 000/for obstructing the assistant referee during the Gwambina FC game. Ame has been fined on provisions of article 39:5(5.6) of the Premier League player's code of conduct," the statement added.

Meanwhile, referee Godfrey Msakila has been banned for three matches for his failure to take control of the game.

Msakila has been punished based on the provisions of Premier League regulation number 40:5 (5.6).

Elsewhere, Simba SC's head coach Gomes Didier Da Rosa has

explained how they are preparing to take on their CAF Champions League quarterfinals opponents.

"We are using internal games in order to prepare for the international games and if we do well then the players' morale will be high when that time comes," Da Rosa said.

He stated: "You know quarterfinal games are tough and require top-notch preparations and I have collected analysis from a friend in South Africa and Algeria in order to help me prepare the team."

He disclosed: "I have videos of three teams that I am likely to face and we have been looking at them from an expertly perspective. We have discovered a number of technical aspects from the teams and we are critically looking at them in order to use them as our own weapons against them."

He noted: "I am not worried at all and I believe we are going to do good and reach the semi-final."

SOT seeks to field athletes in Umitashumta Games

By Correspondent Joseph Mchekadona

SPECIAL Olympics Tanzania (SOT) leadership says it is waiting for the government permission for athletes with intellectual disabilities to be incorporated in the interprimary schools (Umitashumta) games.

Charles Rays, SOT Director, said they wrote the government requesting it for sports among children with intellectual disabilities to be incorporated in Umitashumta activities, noting it is one of the ways of advocating sports inclusion.

Rays said although athletes with disabilities are included in Umitashumta games, there is a need for the authorities to include people with other forms of disabilities including those with intellectual challenges.

He revealed: "We wrote the government asking them to allow us to have our athletes at the inter-primary school games but up to now we have not received any communication from them, but I'm confident we will be allowed to take part at the games as our government advocates for sports inclusion."

He said: "Sports change a person with disability in an equally profound way by empowering persons with disabilities to realize their full potential and advocate for changes in society.

He noted: "Through sports, persons with disabilities acquire vital social skills, develop independence, and become empowered to act as agents of change."

"Sports teach individuals how to communicate effectively as well as the significance of teamwork and cooperation and respect for others," he said.

He further said having children

with intellectual disabilities at Umitashumta games can help in reducing stigma and discrimination which are associated with disability.

He pointed out the approach will moreover create freindships and relationships among the athletes.

The SOT Director further elaborated that through sports inclusion, able bodied persons interact with persons with disabilities in a positive context forcing them to reshape assumptions about what persons with disabilities can and cannot do.

He pointed out: "Having primary school pupils with intellectual disabilities at Umitashumta games can help in reducing stigma which the children face in the society and it can also transform community attitudes about them."

He noted: "During the games on the pitch they can start friendships which can grow outside the playing field."

Rays noted SOT had in 2014 started a program aiming at involving children with intellectual disabilities, with a view to advancing sports inclusion and it gathered momentum five years later when SOT secured funding from Greecebased STAVROS NIARCHOS Foundation.

He said the funding from the Greece foundation saw them reach out to five regions, Dar es Salaam, Morogoro, Tanga, Mwanza and Mtwara.

"With the funding from the STAVROS NIARCHOS Foundation we have managed to reach out to five regions of the country, educating them on sports inclusion and this year we conducted a sports inclusion seminar for coaches and teachers from Arusha, Njombe, Ruvuma and Mbinga district," he said.
